Acknowledgements

After four unforgettable years spent in the bright and friendly group there comes a time to formulate the work that has been done into a dissertation. For this thesis I owe many people for their assistance, contributions and more importantly encouragement during these studies. I am deeply grateful to all of them and pleased to acknowledge some people who helped to make this goal achievable.

I am especially indebted to my promoter Paul Blom, for his support, encouragement, and guidance during these years. I am thankful to him for giving me a wonderful research opportunity in an outstanding group of professionals, and for being provided with a perfect combination of freedom and directions within this research. I am also grateful for his invaluable patience with me and my manuscripts.

Special thanks to Minte Mulder, our technician and implicit co-author of all our publications, whose experience and technical skills made most of the work in the laboratory possible and, moreover, comfortable and pleasant. Many thanks to Alex Sieval for synthesis of "the right stuff", to Kees Hummelen for proofreading the manuscripts and letting me work in their clean-room facilities. Here, I would also like to acknowledge the help of Anthony England, who demonstrated the alternatives to conventional ways of doing things. I am thankful to Emiel Amsterdam for the spherical contributions into the crucial paper. Special thanks to Jurjen Wildeman for being up there and sending his polymers down to us. Cristina, in this sentence I tender my thanks to you for your skillful contributions into my research.

I am indebted to Viktor for being interested and involved, as well as for making several very great presents that helped a lot during the experiments. Audrius, thank you for your smile and always being ready to help. Do you still want your polarizer back? Bert, I appreciate discussions and advices concerning chemistry, and not to a smaller extent, those received with a glass of beer and that have nothing to do with chemistry at all.

Great respect and many thanks to Renate and Margriet for help and patience during the unceasing fight against bureaucracy. Renate, you are the best secretary I have ever met; Margriet, you are the best dancing secretary.

In the year 2001, in Groningen, I have joined a small (almost a family size) team that has by now grown into a big, friendly and highly professional group. Guys and girls from the group: Cristina, Vali, Teunis, Ronald, Magda, Jan Anton, Hylke, Afshin, Margo, Edsger, Francesco, Kamal, Jan, Martijn, Herman, André, Irina, Yuan, Jan, and Frans. I thank you all from making my life easier at work but, especially for making it funnier during the after-work time. I hope to stay in touch with you and to be given a chance to thank each of you in person.

I am grateful to Ronald for his help with the thesis, namely for preparing the Samenvatting out of something like a Summary. Carlijn, thank you very much for doing a miraculous job: for making me a Master of Science by the use of a single stamp. My great appreciation to Murad, who made a very nice picture for a cover page by somehow filtering our bare ideas about the way it should look like.

I wish to express my appreciation to the members of the reading committee, René Janssen, Jasper Knoester, and Paul van Loosdrecht for evaluating and improving this thesis.

I am immensely grateful to Dimka for simply being a friend, one can only dream about. To Alya for standing in the mirror and trying to prove me wrong from time to time right from out of there. To Cristina, Robert and lately little Tudor for warm and careful atmosphere of their house. To Ahim for our marvelous conversations and for a communicable desire to live. Mylene, thank you for being there, and for being the best dancing partner during all these years in Groningen. I am also thankful to Vadim, Yura, Anton, Maxim, Vali, Lindsay&John, Dima, and Sasha for moral support, great fun, and for providing the necessary conditions for long-term survival. To Tamara for trying to convince me of the plain beauty of our world and reachable harmony. Special thanks to Monika and Natasha for moral and "dragging" support.

I am greatly indebted to my parents for their love, trust and constant encouragement; for what I am used to take for granted most of the time.

It is absolutely impossible to remember everyone who helped me during my time in Groningen. In these last lines, I want to apologize to those I have left behind and thank them all.

Denis
Eindhoven, May 06
