Cigarette smoke-induced oxidative stress in COPD

Effects on mitochondrial function, the lipidome and glucocorticoid responsiveness in airway epithelium

Roland Hoffmann

This research was partially performed within the framework of the Top Institute Pharma project T1-201 "COPD, transition of systemic inflammation into multi-organ pathology", with partners University Medical Center Groningen, University of Groningen (RUG), GRIAC Research institute Groningen, University Medical Center Utrecht, University Medical Center Maastricht, Nycomed BV (now Takeda), GlaxoSmithKline, Danone, AstraZeneca and Foundation TI Pharma. This research was financially supported by Stichting Astmabestrijding (SAB 2012/039).

Printing of this Thesis was financially supported by: University of Groningen, University Medical Center Groningen, Stichting Astmabestrijding (SAB), Chiesi Pharmaceuticals bv en Boehringer Ingelheim bv.

Cigarette smoke-induced oxidative stress in COPD

Effects on mitochondrial function, the lipidome and glucocorticoid responsiveness in airway epithelium

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. E. Sterken
en volgens besluit van het College voor Promoties.
De openbare verdediging zal plaatsvinden op
maandag 29 februari 2016 om 14.30 uur

door
