Acknowledgments

As many of you know, these past few years have been a journey into the unknown for me, since I moved to a country where I only knew a handful of people. So, I would like to thank all those who have made this possible, and easier for me. That's it! Bye!

Jokes aside, I am grateful to Eric Bergshoeff and Mees de Roo for hiring me in the first place, especially since you knew very little about me until it was too late for you to get rid of me. I want to thank you, Mees, for putting me on the rails of my scientific career, and for always having your door open for discussions. I am also grateful to you for pushing me to go to Les Houches. That experience turned out to have great influence on my subsequent career decisions. I also thank you for helping me get a postdoc position.

I would like to thank my advisor, Eric, for always steering me in the right direction without being too controlling, for knowing exactly when to listen to me . . . and when to kick me out of his office. Thank you for teaching me how to see the positive side of adverse situations and to turn them into successes. I think, after all these years, I understand. I will do my best to put the lesson into practice, and, who knows . . . may even pass it on . . . I am also grateful to you for all the efforts you made in my final year to help me write this thesis and find a postdoc position.

I am of course grateful to my reading committee, Tomás Ortín, Antoine Van Proeyen, and Jorge Russo, for taking on the task of carefully reading and scrutinizing this thesis.

During the four years of my Ph.D. program, I've had the chance to travel to many interesting places to attend interesting conferences. For that, I am grateful to my department. I am also grateful to the institutions that organized these activities, especially ICTP, RTN, and the Les Houches Physics School.

I would like to thank someone who did not participate in my Ph.D. formation, but certainly prepared me for it. I thank Marcus Luty, my undergraduate advisor, for introducing me to the subject of QFT and for helping me get into graduate school.

It's time to thank my colleagues in Groningen. I will do so in no particular order, neither alphabetic nor prioritized. I would like to thank Wissam Chemissany, for cheering me up with your kind words of support during difficult times, even while you were under the great stress of uncertainty. I am grateful to Diederik Roest and Ulf Gran for providing a friendly working atmosphere, even at times when we disagreed, and for a nice after-work atmosphere. I would like to thank Dennis Westra for all the nice conversations, scientific or not. Te deseo mucha suerte para el año que viene con tus decisiones. Pequeño consejo para la tesis: ¡Empieza temprano! Thanks go out to Rein Halbersma for your comforting words during my first year. I am also

grateful to Jelle Hartong for the discussions and laughs we shared, and to André Ploegh for the nice ongoing collaboration. I would also like to thank ... what's his name ... oh yeah, Sven Kerstan ;). I thank you especially for your support during that difficult application/waiting for answers period. Ich wünsch' dir viel Glück nächstes Jahr. Mikkel Nielsen, thank you for those nice two years of collaboration/chats. I hope you are well and happy with your new life. Román Linares, está bien, no me quejo más ;). Espero que te vaya bien con el tema trabajo y que nos volvamos a ver.

In a few month's time, I will be working at the KUL in Leuven, Belgium. So, under these extraordinary circumstances, in order to avoid a diplomatic conflict, I will have to thank my colleague Thomas Van Riet. Not only for the collaboration and support, and your invaluable teachings on the subject of beer, but also for being such a tenacious, yet friendly challenge to work with.

I am very grateful to Tim de Wit for having helped me help myself out of my perpetual state of computer illiteracy so uncountably many times, and for having done it with a smile. I also thank you for those few but important instances when you gave me real words of advise that had nothing to do with computers.

Martijn Eenink, I would like to thank you first of all for the collaboration during our first year. But especially for the interesting conceptual and scientific discussions that we had after our projects, from which I have learned immensely more. I am also grateful for your support, especially during the final frantic days of thesis typesetting. I wish you the best of luck in your future, whatever path you may choose.

My thanks go to Elisabetta Pallante for elucidating discussions on QFT, but especially for helping me in the process of physically bringing this thesis into existence. I thank Arnout van Enter for all those chats about the history of physics. I am of course grateful to Iris Kwant and Ynske Joustra for all their help, but more so I am grateful to you for allowing me waste so much of your time with all those never-ending conversations about this, that, and the other. Ynske, veel success met je nieuwe baan.

I thank Thomas Cohen for one of the best courses I have ever taken, for advising me from my undergraduate and graduate studies, and for helping me stay on the path in moments of doubt. I would like to thank Michael Brin, for one of the best and most challenging math courses I have ever had (topology), and for scaring me straight in tough times. Prof. Brin, I am of course also grateful to your son for inventing Google, thereby facilitating the writing of this thesis, among countless other things.

Twice during the first two years of my Ph.D. program, I attended the AIO-School, and intensive two-week Physics course covering four subjects. It would not have been such a nice working/fun atmosphere if it wasn't for Paul Koerber, Joris Van den Bergh, Achilleas Lazopoulos, Mboyo Esole, and Stijn Nevens. Stijn, I also thank you for your friendship.

I would like to extend my gratitude to Stefan Vandoren, with whom I have collaborated for the past two years, for all those scientific discussions, which were sometimes peaceful, sometimes heated, but never boring and always friendly. I am also grateful to you Stefan, for helping me get a Postdoc position.

Thanks go out to the wonderful people I met at the Les Houches Summer School for giving me three nice weeks filled with interesting discussions of *all* kinds. I especially refer to Yacine Dolivet, Fabien Vignes, Kazuhiro Sakai, Yulia Klochko, Mauro Riccardi, Shaffique Adam, Oleg

Ruchayskiy, and Marcos Mariño. Marcos, thank you for giving the first comprehensible lectures on open/closed string duality in the context of Topological String Theory. Oleg, you may not know this, but your brief words of encouragement last year have had a tremendous impact on my decisions about pursuing Physics.

All work and no play makes makes Jack a dull boy. I am grateful to Daniele Fausti and Arien Kamp for the best Friday afternoon coffee breaks I could ever hope for.

Boy are these acknowledgments long! Bear with me, I'm halfway through.

I would now like to thank some people whom I have never met. First of all, I thank Johann Sebastian Bach, for getting me through those long nights of thesis writing. I am grateful to Conan O'Brien, the Max Weinberg 7, and the rest of the Late Night Show staff, for maintaining absurdist humor in the airwaves. I thank Dennis Owens for so many years of wise and witty quotes. I am especially grateful to Jon Stewart and the staff of the Daily Show for providing me with a happy ending after every long thesis-writing-night. It's nice to know that, although the world may be devoid of logic and justice, it will never be devoid of humor. On the same note, I must thank certain political world leaders for providing the world with years of prime comedic material. Without them, the Daily Show wouldn't be the same.

I must thank the Philly crowd for the friendship and support I go during and after my Philly period: Greg Grason, Jonathan Fisher (Sitro), Ioannis Papadimitriou, Alper Corlu (sorry, I don't know how to make the Turkish symbol). Thanks go to Rogerio de Sousa for helping me with my important decisions. Matt Stanton, thanks for bringing me back on the path, and for all those late skype chats that brought many thesis nights to a soothing end.

Of course, the AAAHT club has my full gratitude for the wonderful friendship. I especially thank Adrien Russell and Hamet Touré for staying in touch. Mauge Mascolo, thank you also for your friendship. Alejandro Argerich, you's thanked of kwoas. Ale, this is a first on paper: You:"So, was it me or was it Ziggy's theory?"Me:"Naaah! Dey weah boat flaaperonis!!!!". Top that!

I would like to thank the new doctor Patricio Mena for his companionship during all those ever so important lunch/coffee/Belgian beer-breaks. Te agradezco por tu amistad, y también por to apoyo especialmente hacia el final de este sufrimiento que es escribir la tesis. No te olvidas ... we got da brains!!

Kenneth Gustafsson, I thank you for your friendship and your advise about graduate school, and other things. But I am even more grateful to you for coming into my life, because otherwise I would have probably never met a Swedish speaking Finn. I mean c'mon ... what are the odds?

José Torero, my mentor, who continued to mentor me years beyond his contractual requirements, thank you for all those hours in that little office at College Park. Even though I was first educated in the French system, it was you who showed me how to use logic in real life. Your words had the greatest influence (i.e. it's all your fault) that made me choose this field at that bifurcation in my life. Your not too fresh, yet not too old experience in the doctoral life helped me get through this in one peace. No te pierdas Torero, nos llamamos, ¿ta?

Bruno Cazzuli I thank for 28 years of ongoing friendship. Even when you're far away, all I need to know is that you exist, and the world makes sense. ¡Y ahora comé lo que hay y no j. ...!

I also thank Diego D'Alessandro for those free therapeutic sessions that helped me through this Ph.D. process.

In the field of physics, one of the most difficult things to live with is the pressure to distinguish oneself from the rest, to exceed mediocrity. That's why it is nice for me to know that there's a place where I can feel special. I thank my family in Geneva for that: Stephania, Cati, Marios and Costa Zourdos.

I posthumously thank my aunts Margherita and Luciana Collinucci, who, before their untimely passing, morally supported me in my pursuits. I am grateful to my father, Luigi Collinucci and my aunt Regina Collinucci for believing in my abilities and encouraging me in my studies.

I also would like to posthumously thank Clara Stromer, my grandmother, for her affection, and for believing that I can do anything.

I am grateful to Anny Steen, who helped me settle into this country and treated me like one of the family.

For the sake of the trees! I must bring this to an end.

None of this would have been possible without the help and support (moral *and* financial) of my mother, who put me through school, college and beyond. Susana Eri also largely contributed to this thesis by finding numerous mistakes, but it is mostly her scientific contribution in the form of diagrams that I am grateful for ;). Gracias por todo mami, espero que estés orgullosa. SG está presente.

Last but not least, I would like to thank Christel Steen, my partner in life. Thank you for coming back to me in Philly. I couldn't have hoped for a better change in my life. Most of this thesis was written while you were trying to sleep. Thanks for being patient with my night-owl habits. But thank you most of all for your support and your warmth. I couldn't have done this without you. For this and so much more, I love you!
