Acknowledgements

After I finished my master's thesis in Statistics at the University of Groningen about a practical case study at the IB-Groep, Ton Steerneman asked me whether I would be interested in a PhD project on the subject of Statistical Auditing. I accepted his offer, because I was interested in discovering more about Statistics, and the practical side of this project appealed to me in particular. During my years as a PhD student I have indeed enjoyed the practical side of it, and I have learnt more about Statistics and discovered even more about myself. It has been a very eventful period. Looking back on this period, I am proud of the achievements I have gained from writing this thesis and I am grateful for my development, both on a professional and personal level.

Fortunately, while writing this thesis I had the help and support of many people. First of all, I would like to thank my first promotor, Ton Steerneman. His confidence in me, his patience with me, and his enthusiasm were very important to me, but above all I appreciated the personal nature of his guidance. Maybe I should have consulted my second promotor, Jaap van Manen, more than I did, but I really value the input he had in this thesis and I enjoyed his frank way of communication. I am indebted to the members of the reading committee, Gerard Sierksma, Chris Klaassen, and Martien van Zuijlen for reading the manuscript, and for their suggestions for improvements. I would like to thank the IB-Groep for giving me the opportunity to conduct the practical side of my research. I am grateful to Ton Palmans and Koos Leeuwerik for their help. I thank one of my new colleagues at Organon, Henk van Zwam, for his comments on my thesis.

Teaching has been a welcome distraction from my research activities. I enjoyed working together with Sytse Knypstra, Wim Voorhoeve, Padma Rao Sahib, and Ruud Koning, who were always interested in my personal well-being. I am

also grateful to Tom van der Hoeven, my occasional roommate, for sharing his experiences with me and for the strange discussions we had.

Playing football has been my favourite pastime and an excellent way to release some tension. I would like to thank all the people I was involved with at CVVB. This unmistakably is a club where football is played with the heart. The past few years I also played indoors. My team-mates at Doelloos, WMC and Poel Keukens are thanked for the pleasurable times they have given me.

Many friends had a positive influence on this thesis and I am grateful for their love and support. Especially, I would like to mention Ruben van Veen, Bas Westra and Andreas Dallinga. They have been very loyal friends and I cherish their friendship.

I feel privileged with my two *paranimfen*. Frederieke van Perlo-ten Kleij was also a PhD student of Ton and she has become a very close friend. I am already missing our daily tea breaks. My ‘little’ brother, Ronald Talens, is one of the most important people in my life and I am proud that he is one of my *paranimfen*.

Pa and *ma* have always been there for me. I am extremely grateful for having such loving and caring parents.

Finally, I would like to thank Ingeborg who stood by me every step of the way. Without her unconditional love I could not have written this thesis!

Erik Talens
