Acknowledgements

It is a pleasure to thank many people who made this thesis possible. First and foremost, I am grateful to my Ph. D. supervisor, Erik van der Giessen, for giving me an opportunity to work with him in the micromechanics of materials group in Delft University of Technology and later in the University of Groningen, for his persistent guidance through my Ph. D. years, his patience and kindness.

I would also like to thank Istvan Groma for putting forward his continuum dislocation dynamics model that has become a basement of this Ph. D. project, for his large and consistent interest in the project during the times and for his co-authoring.

I am also grateful to the members of the micromechanics research group for an excellent working atmosphere. I would like to acknowledge everybody who helped me to develop the project by giving time, insight, ideas and criticism. I am particularly grateful to Lucia Nicola and Steffen Brinkmann for their help with the discrete dislocation plasticity part of my research.

I would also like to acknowledge the members of the Reading Committee for their valuable comments to the thesis.

Last, but certainly not least, I would like to thank my parents for their love, support and eager to know about every advancement in my work. And I definitely could not finish this without thanking my wonderful, patient and loving Elena, who has been a great source of strength, understanding and support through this work.

Serge
