Acknowledgments

Some years ago... I was celebrating my 25th birthday at the Institute of Technical Physics Iasi, Romania. After that, instead of going home, I checked once again my e-mail. It turned up that I was invited for an interview at the University of Groningen. This was a result of my previous application for a PhD position in the NVSF group. My story begins at that moment; it couldn't be a better time. Now, it is the time to thank everybody who helped me to work for the last four years at the University of Groningen.

My first thoughts are to my supervisors: Bert Niesen and Dik Boerma. Thank you for giving me the chance of working in your group. You both were close to me when I had to make important decisions in my research. Bert, every time when we set a new experiment you had the patience to analyze all the details. Due to your continuous support it was possible to prove that indeed "it works". Later, when I was trying to interpret the results, you gave me the guidance to navigate through the piles of articles found. It was always a joy to come to a conclusion after our long discussions. Dik, I want to mention our group meetings. At the beginning I thought that there were too many, but later on I realized that this is the most efficient way to get a good start of any project. We, the PhD students, had a lot to profit from the knowledge of the other members of the group. Apart of this, you always kept the door of your office open for me. Your supervision was based on good reasoning followed by a multitude of new ideas. Dear promotores, thank you for all of this and much more.

I also want to thank my close collaborators, Nikolai Chechenin, Toni Chezan and George Palasantzas. Without your contributions this work could have been even more difficult to carry out and certainly of less quality. I also mention the others participants to our "nitriding-meetings": Evert du Marchie van Voorthuysen, Tom van Veen, Dana Borsa, Sergey Grachev and Andrei Mijiritskii. Your presentations stimulated my research. Frits Pleiter, thank you for helping me with data acquisition systems and with my daily problems related to computers. I have saved a lot of time using your programs (especially MCTL). Luben Kalev, although your project was not directly related to my research, discussing about magnetism with you was a good source of new information.

Thank you Prof. dr. Lodder, Prof. dr. De Hosson, Prof. dr. Palstra and Prof. dr. Den Hartog for allowing me to perform experiments in your laboratories. Special thanks to Hans Golstein (SRON Groningen) for assistance and advice in performing the high frequency measurements. You let me use your equipments and never said no when I needed something. Thank you Martin Siekman (MFM), David Vainshtein (X-band FMR), Fop ten Broek (chemicals and nitriding), Jan Reinders (sputter

deposition), Leo Huisman (electronics), Frans van der Horst (XRD facilities), Jan Smit (electro-technical solutions). I also appreciate the quality of the work done by the people from the Electrical and Mechanical Workshops.

Thank you Prof. dr. J.C. Lodder and Leon Abelmann for your understanding especially in these last months. Finishing the thesis was also possible due to your attitude (I work in your group now).

During these years I have made many friends who helped me to have a very pleasant social life. Mihai and Aurora Murariu, Andrei and Cosmina Jalba, I thank you for unconditional friendship. Andrei and Diana Filip your way of solving problems was most of the times an example to be taken into account. I must remember also my friends from the student-house in Selwerd: Huub and Stefan. Thank you for showing me what I call the youngest side of the Dutch society. Thanks to all of you who join me at the parties, football games, swimming, watching movies, computer games and many other things: Marius, Szili, Diana, Gabi, Vali, Alexandra, Jisjka, Meyke, Misu, Gabi (Blaj), Oana, Catalin, Alex and Dan.

Finally, I want to thank my family for encouragement and love. Mother, you gave me compassion every time when I needed it. My dear sister, you made my holydays full of nice surprises and brought me back the company of my old friends. And father, your advice was always leading me to success.
