Electrical Spin Injection in metallic Mesoscopic Spin Valves

Voor pa & ma

Cover: @tKraak Design, Den Haag.

The work described in this thesis was performed in the group 'Physics of Nanodevices' (part of the Materials Science Centre) at the Solid State Physics Laboratory of the University of Groningen, the Netherlands. The project was supported by the Dutch Foundation for Fundamental Research on Matter (FOM) with financial support from the Dutch Organization for the Advancement of Scientific Research (NWO).

RIJKSUNIVERSITEIT GRONINGEN

Electrical Spin Injection in metallic Mesoscopic Spin Valves

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
vrijdag 6 december 2002
om 16.00 uur

door

Friso Jacobus Jedema

geboren op 4 juni 1973
te Leeuwarden

Promotores: Prof. dr. Ir. B.J. van Wees
Prof. dr. Ir. T.M. Klapwijk

Beoordelingscommissie: Prof. dr. M.L. Roukes
Prof. dr. J. Bass
Prof. dr. R. Coehoorn

Contents

1	Introduction	5
1.1	Spintronics	5
1.2	This thesis	6
2	Theory of spin polarized electron transport	11
2.1	Introduction	11
2.2	Stoner ferromagnetism	12
2.2.1	Electrical properties	13
2.2.2	Spin polarization	14
2.2.3	Anisotropic magnetoresistance	17
2.3	Spin injection and accumulation: the basic idea	18
2.4	Spin injection and accumulation in a diffusive conductor	19
2.4.1	The two channel model	20
2.5	Spin injection with transparent interfaces	23
2.5.1	The transparent F/N interface	23
2.5.2	Multi-terminal F/N/F spin valve structures	25
2.5.3	Resistor model of F/N/F spin valve structures	28
2.6	Spin injection with tunnel barrier contacts	30
2.6.1	The F/I/N injector	31
2.6.2	The F/I/N detector	31
2.6.3	The F/I/N/I/F lateral spin valve	32
2.6.4	Injection/relaxation approach	34
2.7	Conduction electron spin relaxation in nonmagnetic metals	35
2.8	Electron spin precession	37
2.8.1	The ballistic case	37
2.8.2	The diffusive case	38
2.8.3	The magnetic picture	42
2.8.4	Modulation of the precession signal in high magnetic fields	43
2.9	Remarks	44

3	Experimental techniques and sample fabrication	49
3.1	Introduction	49
3.2	Sample fabrication techniques	49
3.2.1	Electron beam lithography, EBL	50
3.2.2	Creating an evaporation mask using electron beam lithography	51
3.2.3	Metal deposition	54
3.2.4	Lift-off	55
3.3	Interface quality	56
3.3.1	Transparent interfaces	56
3.3.2	Tunnel barrier junctions	57
3.4	Fabrication procedure of the individual samples	58
3.4.1	Design requirements	59
3.4.2	F/N/F spin valve structures	59
3.4.3	F/I/N/I/F spin valve structures	62
3.5	Measurement techniques	64
4	Magnetization reversal processes in rectangular ferromagnetic strips	67
4.1	Introduction	67
4.2	Magnetization reversal via uniform rotation	67
4.3	Non-uniform magnetization reversal	69
4.4	The AMR behavior of rectangular Py and Co strips	69
4.5	Magnetoresistance behavior of the Py/Cu contacts	72
5	Spin injection in F/N/F systems with transparent contacts	77
5.1	Introduction	77
5.2	Spin accumulation in Py/Cu/Py spin valves	77
5.2.1	Non local spin valve geometry	78
5.2.2	Conventional spin valve geometry	80
5.2.3	Dependence on Py electrode spacing	82
5.2.4	Comparison with Johnson Spin Transistor	84
5.3	Spin accumulation in Py/Al/Py spin valves	85
5.3.1	Spin valve measurements	85
5.3.2	Dependence on Py electrode spacing	87
5.4	Spin injection using Co and Ni ferromagnetic electrodes	88
5.4.1	Spin accumulation in Co/Cu/Co spin valves	88
5.4.2	Spin accumulation in Ni/Cu/Ni spin valves	89
5.5	Spin relaxation times of conduction electrons in metals	91
5.5.1	Quantative analysis of the spin relaxation time τ_{sf} in Cu and Al	91
5.5.2	Spin injection efficiency of Py, Co and Ni ferromagnets	94
5.6	Conclusions	97

6	Electrical detection of spin precession	101
6.1	Introduction	101
6.2	Polarize/analyze spin valve experiments	101
6.3	Modulation of the spin valve signal by spin precession	107
6.4	Conclusions	110
7	Spin dependent transport in F/S systems	113
7.1	Introduction	113
7.2	The F/S system	113
