## CONTENTS

- Chapter 1: General introduction
- Chapter 2: The impact of hematopoietic growth factors on supportive care in clinical oncology: with special attention to potential tumor cell contamination in the stem cell harvest: *A review*
- Chapter 3: Epithelial glycoprotein-2 as a marker for minimal residual disease in breast cancer patients
- Chapter 4: Detection of micrometastatic breast cancer by means of real time quantitative RT-PCR and immunostaining in perioperative blood samples and sentinel nodes
- Chapter 5: Real time quantitative RT-PCR and immunostaining for detection of circulating tumor cells in breast cancer patients
- Chapter 6: Purging of epithelial tumor cells from peripheral blood stem cells by means of the bispecific antibody BIS-1
- Chapter 7: An in vitro model for purging of epithelial tumor cells from cryopreserved ovarian tissue of women with impending fertility loss due to cancer treatment
- Chapter 8: Prevention of febrile leukopenia after chemotherapy in high risk breast cancer patients: no difference between granulocyte-colony stimulating growth factor or ciprofloxacin + amphotericin B
- Chapter 9: Telomere length in breast cancer patients before and after chemotherapy with or without stem cell transplantation
- Chapter 10: Death receptors in primary breast cancer

Chapter 11: Summary and future perspectives

Chapter 12: Nederlandse samenvatting
