Bottom-up and top-down forces in a tropical intertidal ecosystem

THE INTERPLAY BETWEEN SEAGRASSES, BIVALVES AND BIRDS

Royal Netherlands Institute for Sea Research

The work presented in this thesis was conducted at the Department of Coastal Systems (COS) at NIOZ Royal Netherlands Institute for Sea Research according to the requirements of the Graduate School of Science (Faculty of Mathematics and Natural Science, University of Groningen). The research was funded by a personal grant from the Netherlands Organisation for Scientific Research (NWO-VIDI 864.09.002) awarded to J.A. van Gils. The printing of this thesis was funded by the NIOZ Royal Netherlands Institute for Sea Research and the Faculty of Mathematics and Natural Sciences of the University of Groningen.

This thesis should be cited as:
