Acknowledgements

At the end of this work, I would like to express my acknowledgements to all the people helped me in the past four years achieving this result.

First, I'm sincerely grateful to my supervisor Prof. Maria Loi, who offered me this position. I have deeply appreciated Maria your supervision during the years of my PhD in particular for your always being open to discuss with me the outcome of our research. This project was very challenging for me since I did not have any experience in photoelectrochemistry before! You helped me to design and implement the photoelectrochemical setup and we have successfully made our first liquid-electrolyte solar cells after less than one year and after hundreds of failures. You always taught our colleagues and me and helped us to keep the lab super clean!! Thank you for giving me many opportunities to be involved in interesting cooperation projects and for allowing me to attend many international conferences and summer schools. After I gained the experience within my first project, I was more and more confident with my work. I really appreciate your support and trust, allowing me to follow my crazy ideas. At the end of my project, we demonstrated that we are able to functionalize almost all the materials we have investigated for photoelectrochemical applications.

I want to thank also the funding from FOM and all the "BioSolar Cell" crew. It was a great pleasure for me to be involved in the joint project together with many physics and chemists from all the institutes in the Netherlands. I would like to thank in this regard Delta Electronics that provided me a scholarship for my studies. I thank the I-CAMP committee, which provided me a fellowship to join the one-month fruitful photovoltaic summer school with lots of intense lectures, which allowed me to directly interact with renowned scientists in the world.

I truly appreciate our cooperators Prof. Maksym Kovalenko, Loredana and Dmitry who provided high quality nanocrystals. Without your nanocrystals, our project would never achieve the same results.

I thank Prof. Joost Reek and Remko who provided us some fantastic catalysts and supported us with the gas chorography measurements.

Prof. Jih-Jen Wu and Prof. Jen-Sue Chen, thank you for the endless scientific discussions; I will never forget the kind way you welcomed Maria and me in Taiwan. I deeply value your suggestions for my future career and all the care you always showed me.

Acknowledgements

I would like also to express my truly appreciation for Prof. Jen-Sue Chen who supervised my bachelor project and opened my eyes to the research world. You inspired me so much to keep on doing research without giving up in more difficult times.

Prof. Jih-Jen Wu, you provided me very informative courses about the device physics and semiconductor processing and you shared your precious experience in the company during my bachelor, inspiring me to continue in the semiconductor research. Thank you very much!

My sincere acknowledgements go to the members of the Photophysics and Optoelectronics group.

Marianna, I deeply thank you for treating me as your younger brother and for always encouraging me when I felt a bit down. I truly hope we can be colleagues again in the future so that we can share the office and nice food together! I really appreciate that you accepted to be my paranymph.

I'm grateful to Widi, my housemate and officemate, not only for providing me high quality and large quantity of carbon nanotubes for my experiments, but also for teaching me how to cook Indonesian food and very tasty cakes. I hope that the distance will not affect the possibility to have in future some collaboration and nice papers together.

I thank Vlad who was the professional car driver during many successful and funny trips.

A deep acknowledgement to Frans, who helped me build the photoelectrochemical measurements system in a period when Arjen had to stay home for a broken leg.

And Arjen, you helped me writing the LABVIEW program and you spent lots of effort maintaining the lab. Thank you!

I would also like to thank Insan who always helped me without any excuse. I proudly saw your huge progress during the years in Groningen and Tokyo. I believe you will have a successful academic life.

I thank Mark for the many useful and informative discussions we had in the lab.

Matthijs, you are my best master student in RuG. You always were eager to learn many different things and you always showed a huge interest in different aspects of life, beside science. I really appreciate your life style!

A special thank you goes to Pavlo who helped me produce high quality AFM images.

I would like to thank all the other P-OE group members: Daniel, Jorge, Simon, Artem, Musty, Sampson, Bart, Dima, Natasha, Wytse, Satria, Shuyan and Honghua, Raissa, Nisrina, Jian, Solmaz, Tejas, Jan Anton, Niels,

Nutifafa, Davide, Azadeh, Misha. I hope I will be forgiven if I am forgetting someone.

Many thanks also to the people who shared with me the first year in the student house, e.g. Ye Ma, Vera, Coco, and many others. You helped me a lot when I first arrived in Groningen. I acknowledge all my housemates who shared the house with me: Mu-Chieh, Widi, Artem, Schumann. I will always remember all the precious kitchen experiments although most of the times they failed! A special thanks goes to Peter Chen. Peter, your propaganda about Groningen, convinced me that this would be a good decision.

Teresa, I will never forget our many nice trips together. I really enjoyed the time we spent together travelling.

Yanxi you are the friend who always joined me during the dinners in the canteen. I really appreciate that you accepted to be my paranymph.

During the time in Groningen I had also a professional barber and a good trip organizer: thank you very much dear Fean!

I would never be able to accomplish such a result without the constant support from my friends in Taiwan. Jih-Sheng I deeply appreciate you in many ways. You always gave me wise suggestions when I got puzzled about my experiments and you always shared your precious experience with me. I would like to thank Yun-Ju who helped me to design the cover of the thesis. I appreciate all the people who accompany me when I take vacations in Taiwan: Yi-Chen, Ren-fong, Shin-shian, Chih-Yu, Hsueh-Fang, Kang-Hua, Yun-Tin, Tin-Yi, Chiao-Yen, Chin-Yu, Hsiang-Pi, and many more.

Last but not least, I would like to thank all my family, starting from my aunties who always give me a big support during my study. I would like to express my deepest gratitude towards Mama and Papa who fully supported my decision to study abroad and always showed me their love. Lai-Ping, dear brother, thank you for taking care of our family when I am not there. I love you all, without you I would never be able to finish this work!
