RIJKSUNIVERSITEIT GRONINGEN

Spheroidal Components of Spiral Galaxies

Structure and Evolution

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus Dr. F. van der Woude
in het openbaar te verdedigen op
vrijdag 19 december 1997
des namiddags te 4.15 uur

door

Ioannis Andredakis

geboren op 2 juli 1969
te Athene, Griekenland

Promotor: Prof. Dr. R.H. Sanders

ISBN 90-367-0843-5

Contents

1	Introduction	7
1	Bulges of spirals	7
1.1	Overview	7
1.2	Analysis of the bulge surface brightness	11
2	Dark matter halos of spirals	12
2	Exponential bulges in late-type spirals	17
1	Introduction	17
2	Sample	18
3	Fitting method and goodness-of-fit indicators	19
3.1	Reduced chi-square and Goodness-of-fit	19
3.2	Parameter errors and fitting residuals	20
4	Decomposition	21
5	Reliability of the decomposition results	26
6	Distribution of the bulge properties	29
6.1	Bulge-disk correlations and luminosity ratios	32
7	Conclusions	33
A	Plots of exponential fits and residuals	35
3	The shape of the luminosity profiles of bulges	41
1	Introduction	41
2	Sample, observations and reduction	42
3	Bulge-disk Decomposition	43
3.1	Outline of the method	43
3.2	Testing of the algorithm	47
3.3	Assumptions and errors of the method	50
4	The shape of the bulge profiles	52
5	Discussion	54
5.1	Correlations of n with the bulge parameters	54
5.2	Bulges in the Fundamental Plane of elliptical galaxies	59
6	Conclusions	60
A	Plots of the bulge profiles	62
B	PSF of the observations	67

4	Effects of a disk field on the bulge	69
1	Introduction	69
2	N-body realizations of bulges	71
2.1	Construction of the N-body models	71
2.2	Diagnostics and stability of the models	73
3	Evolution of models with a disk	74
3.1	Remarks on the evolution of a generic model	74
3.2	Radial dependence of the parameters and effects of different disk growth modes	78
3.3	Dark Halo and non-adiabatic disk.	80
4	Comparison with observations	82
4.1	The parameter space of B/D and h_d/R_{eff}	82
4.2	Different initial bulge profiles.	87
5	Discussion	88
6	Conclusions	90
A	Distribution functions of the models	93
5	Disk-halo interaction and the plausibility of halo density laws	95
1	Introduction	95
2	Initial conditions and N-body modeling	97
2.1	Disk formation in CDM halos	97
2.2	The γ family of models	97
2.3	N-body setup	99
2.4	The self-consistent field code	101
3	Effects of the disk field on the halo density	101
3.1	The shape of the halo	101
3.2	The density distribution	102
4	Effects of the disk field on the rotation curve	105
5	Baryonic blow-out as a means to create a core	109
6	Conclusions	112
A	Stability of anisotropic models	115
B	The accuracy of the axis ratio determination	118
6	Summary	121
1	Bulges of spirals: Light profile and evolutionary history	121
2	Dark halos of spirals: Initial density laws	123
3	Outlook	124
	Nederlandse Samenvatting	125
	Acknowledgements	129
	Publications in refereed Journals	130
