Microbial community assembly in an evolving ecosystem

Ecological succession and functional properties of soil microbes

The research reported in this thesis was carried out at the Microbial Ecology cluster, which is part of the Genomics Research in Ecology and Evolution in Nature (GREEN) research group, Groningen Institute for Evolutionary Life Sciences (GELIFES), University of Groningen (The Netherlands).

Francisco Dini-Andreote received a PhD grant from the Graduate Programme of the Dutch Science Foundation (NWO). The research was furthermore supported by the Ubbo Emmius Fund and Gratama Foundation.

The printing of this thesis was partly funded by the University of Groningen and the Faculty of Mathematics and Natural Sciences (University of Groningen).

Microbial community assembly in an evolving ecosystem

Ecological succession and functional properties of soil microbes

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. E. Sterken
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on

Friday 9 September 2016 at 14.30 hours

by

Francisco Dini-Andreote

born on 26 February 1985
 in Piracicaba, Brazil

Supervisors

Prof. J.F. Salles

Prof. J.D. van Elsas

Assessment committee

Prof. G. Kowalchuk

Prof. S. Hallin

Prof. H. Olf

Contents

| | |
|--|-----|
| <u>CHAPTER 1</u> | 7 |
| General Introduction | |
| <u>CHAPTER 2</u> | 25 |
| Dynamics of bacterial community succession in a salt marsh chronosequence: evidences for temporal niche partitioning | |
| <u>CHAPTER 3</u> | 53 |
| Disentangling mechanisms that mediate the balance between stochastic and deterministic processes in microbial succession | |
| <u>CHAPTER 4</u> | 79 |
| Ecological succession reveals potential signatures of marine–terrestrial transition in salt marsh fungal communities | |
| <u>CHAPTER 5</u> | 111 |
| Unveiling the blueprint of the marine-to-terrestrial ecosystem transition in microbial adaptation and evolution | |
| <u>CHAPTER 6</u> | 139 |
| Reconstructing the genetic potential of the microbially-mediated nitrogen cycle in a salt marsh ecosystem | |
| <u>CHAPTER 7</u> | 169 |
| Microbial community assembly in soils: a synthesis | |
