Acknowledgement

First of all I acknowledge my parents who always motivated me to study while they never had the opportunity to study after primary school.

I would like to express my gratitude to my thesis supervisors Nomdo Jansonius, Anneke Hooymans and Steven Koopmans, for their gentle guidance and their dedication in helping me introducing and discussing the results and place them into perspective.

Thanks to all co-authors and collaborators, it was a pleasure.

Thanks to all of my colleagues world-wide who helped and inspired me from the start of my career in process and product development of intraocular lenses more than 20 years ago. This thesis has his origin the moment Patricia Piers motivated me to keep developing my career. I thank her for her support and guidance and together with Gerard Hoekstra, for offering me the possibility to follow this PhD program.

Marrie,

Engelbert, July 2016
