## Acknowledgements

I have tried hard, very hard to never leave this group. First a bachelor project, then my master project and finally my PhD all in the nanodevices group. Still, everything comes to an end and I believe this is finally the case for my time in this wonderful group. As tradition has it it is time to thank some people, here we go!

First I would like to thank Tamalika, not only did you supervise me during my PhD but in my master project as well. On top of that you provided me with the opportunity to spend almost a year in the group of Jagadeesh at MIT. I am also pretty sure I would not have thought of doing a PhD if you had not offered it to me which would have been something I would have regretted my whole life. Looking back I really enjoyed my time in your group and feel sad this comes to an end!

Bart and Casper, it was great to have occasional discussions with you. If I wanted to discuss there was always the opportunity to drop by, something which I greatly appreciate.

Jaroslav, I want to thank you for the invaluable insights, discussions and input you provided in my (our) work. I felt really honored to be invited by you to give a talk about my work in Regensburg. I have good faith that more interesting results will spawn from our ongoing collaboration.

Petra, thank you for our Skype discussions and taking the time to explain your theoretical findings to me many times over. It was (and still is) great to have the luxury of working with such a strong theoretician.

Ray, I am extremely grateful for all the discussions we had. Special thanks for thorough reading of my thesis and giving me feedback!

I would also like to thank the professors from my reading committee, Prof. van der Wiel, Prof. Leighton and Prof. Palstra, for taking the time to read my thesis.

Eric, you were a great master student but it was even better to have you as a PhD colleague. This way we could travel to Hawaii together, a real important hot spot for science as we all know! You were always available to discuss science and your friendly attitude to any kind of person is inspiring.

Roald, how great it is to have someone to complain against, who understands inappropriate jokes but with whom you can also work hard. Although it is only in

the last phase of my PhD that we started really working together I think it is safe to say that we both got renewed energy from this. Hold on tight, you are almost there!

Saurabh, we started our PhDs at the same time.. you finished first, well done. It was great traveling the globe with you to conferences. I wish you the best of luck in you marriage, work and life!

Subir and Gaurav, it was great meeting you in my master but even better to join you as a PhD. Although you were only present during the first 2 years of my PhD I will not soon forget you as we three were the first students in Tamalika's group. Subir, thanks for all your help with the BEEM setup and Gaurav, I can't thank you enough for introducing me to the PLD setup, the XRD etc...

Arijit, it wasn't always easy to be my master student but as a PhD I see you grow every day. I wish you all the best in your PhD project and don't forget: BURN TO SHINE!

Jasper en Jakko, I don't think there exists a research group in the world where three very close friends end up together. Luckily we were nicely dispersed over the three available professors otherwise little work might have been completed. Although our life as direct colleagues will soon end I cherish the fact that forever we will remain friends.

Ludo, first of all thanks for being my paranymph. Secondly, it has proven extremely helpful to have a person in the group such as you who is both a good python programmer and willing to help people. Thanks for setting up and problem solving the Tesla setup which has been really important in my research!

Pep, although it is sometimes hard to understand what you are saying with your strong Spanish accent ;) you turn out to be quite funny once your understood. Also thanks for helping me with annoying conceptual and theoretical problems related to spintronics.

Christian, look at the bright side of life it might surprise you!

Nynke, I already miss the fun we had especially on group outings or conferences. Somehow you always brought out the best in me ;)

André, I can not thank you enough for helping me out with measurements at Saroj's lab which gave the push my project really needed. Thanks as well for all your valuable insights, the silicon based 3T device and technical drawings of the dipstick. I truly believe you are one of the kindest persons I have met in my life.

Saroj, I want to thank you for the opportunity to use your measurement setup which was invaluable for my PhD. I believe it was one of the most well spend (and exhausting) weeks in my PhD.

Johan, without your relentless efforts to help me out with all kinds of stuff (whether organizational or technical) I am sure my PhD would have been much more of a mess. You are the master of quick fixes and nothing can't be done.

Martijn, I can't really thank you for all the things you did since I can't allow this thesis to grow much more. Maintaining the cleanroom, building complicated dip-

sticks, fixing complicated dipsticks, fixing cryo system,... it goes on and on. Thanks!

Bernard, sadly you left the group but I guess you are pretty happy about that! It was great having you around the first part of my PhD and when you left it was still great to call you for much needed advice, you can never truly leave I guess...

Tom, ofcourse a great technician but moreover a great officemate. It was good fun to share your love for music and a pleasure to taste your homemade chutney (green tomatoes need never be wasted!). Unfortunately I haven't been able to visit you at your windmill but I surely hope I will someday.

Herman, you are fast, efficient and extremely patient. Much needed qualities when you had to rewire a broken dipstick, which unfortunately you had several times. Thanks for all your help with switch boxes, wires etc.

And of course thanks to everyone at FND, Anna, Frank, Joost, Alina, Ivan, Fasil, Alexey, Magda, Christian, Kumar, Mallik, Siddartha, Madhu Aisha, Juan, Jing, Olger, Sander Onur, Danny, Gerjan. I had a wonderful time in the group!

I would also like to thank Jeroen Heuver, Arnoud Everhardt en Jakob Baas for their help with X-ray diffraction and the PLD system.

Arunesh, you were always eager to listen to me and explain me how exactly I didn't quite understand something the correct way. Thanks for all the insightfull discussions and good luck with your thesis.

Johnny, although you are in the NE group far far away in Twente I want to thank you for your help with all kinds of stuff such as sample dicing etc. especially for your help in growing a set of samples using the MBE of the NE group.

Als laatste bedank ik jou Roos want je weet zonder jouw liefde, begrip, geduld en gekkigheid had ik zo'n proefschrift nooit afgemaakt! En nu maar hopen dat ik mijn kennis ken.

Sander
