Contents

Chapter 1	General introduction: Toward engineering a novel transplantation site for human pancreatic islets. <i>Diabetes 2013</i>	5
Chapter 2	Enzymes for pancreatic islet isolation impact chemokine-production and polarization of insulin-producing beta-cells with reduced functional survival of immunoisolated rat islet allografts as a consequence. <i>PLoS One 2016</i>	33
Chapter 3	Selection of polymers for application in scaffolds applicable for human pancreatic islet transplantation. <i>Biomedical Materials 2016</i>	63
Chapter 4	A retrievable, efficacious polymeric scaffold for subcutaneous transplantation of rat pancreatic islets. <i>Annals of Surgery 2016</i>	91
Chapter 5	Metabolic control after allogenic rat islet transplantation into a subcutaneously implanted, prevascularized, and replaceable polymeric scaffold.	119
Chapter 6	An islet-titration study in a prevascularized, retrievable poly (D,L,-lactide-co-ε-caprolactone) subcutaneous scaffold as transplantation site for pancreatic islets. <i>Submitted</i>	137
Chapter 7	Stimulation of vascularization of a prevascularized scaffold enhances immediate post-transplant pancreatic islet graft function but not long-term normoglycemia. <i>Submitted</i>	159
Chapter 8	General discussion	183
	Summary	197
	Nederlandse samenvatting	203
	Curriculum vitae and publications	209
	Dankwoord	212
