Acknowledgments

In June 2012 I started my PhD in Groningen, fresh from university and ready to explore some of nature’s curiosities. Since then, I have spent countless hours in the lab and I have experienced the ups and downs of scientific research. Luckily, I had the advantage to travel to other parts of the world where I met many different people; some of them have become good friends, collaborators and colleagues. Now, I can honestly say I have learned a lot during this period, not only in the scientific arena but also on a personal level. The thesis you are holding in your hands is the result of what I have achieved in the last four years. Now it is time to write the last few lines, which I would like to dedicate to everyone who has supported and helped me throughout my PhD.

First, I want to thank my supervisor Bert Poolman. I admire your calmness, effectiveness and hard work. Thank you a lot for your advice and all the corrections on the chapters and manuscripts. It was a pleasure to work with you. I would also like to send my sincere appreciation to the members of the reading committee, Frank Bruggeman, Matthias Heinemann and Wouter Roos for critically reading my thesis and providing valuable suggestions and corrections.

My thanks extends to Antoine van Oijen for granting me the access to the PALM microscope, and to Matthias Heinemann for making the flow cytometer and the KEIO collection available to me. I would also like to thank Sam Miller, Ian Booth and Akiko Rasmussen from the University of Aberdeen for their contributions to the Scientific Reports paper.

Furthermore, I am very grateful for Arnold’s assistance. Thank you for all the input about crowding and your contribution to Chapters 1 and 5. Chapter 4 would not have been possible without the help of Ryan who performed the uptake experiments with me, and Patricia who made an *E. coli* knockout strain. I would like to offer my special thanks to Franz for all the great cloning tips and tricks and for the supply of a number of plasmids. Thank you to Jacek, whose project I had continued. Your strains and plasmids were of great help to me. I greatly appreciate the help of Paul who has performed a couple of simulations and has always provided me with new ideas. Thank you to Michiel for programming the tools to analyze the PALM data, and to Kuba for providing the script to determine cell volumes. My thanks also to Tim, who helped me with cloning and microscopy as part of his master project.

I wish to acknowledge Ria and Gea, who were extremely helpful in the lab, Margriet for her assistance outside the lab and Dirk for his support. Assistance
provided by Viktor, Andrew and Evelyn for all the single-molecule and microscopy-related issues was greatly appreciated.

A special thank you to Weronika and Brenda. The fact that you two are my paranimfs proves that your friendship is very important to me. Thank you for supporting me during the writing-phase and for helping with the arrangements for my defense.

My friends Boqun, Christoffer and Matteo made the time in the office a joyful time, thank you guys for all the fun moments we had. When I started my PhD, there were still Arnold, Anna, MacDonald and Nadja in the office and now Adi has joined the round. Keep the spirit of office 111. :)

The membrane enzymology group was my home within the university. I enjoyed working there and I feel it is a privilege to work within a group that creates such a pleasant atmosphere. I sincerely thank all the members that are, or were, part of membrane enzymology.

A big thank you goes out to the NICHE consortium, Heloisa, Lucas, Juan, Irem, Celine, Cristian, Ruslan, David, Atilla, Silvia, Tom and Corinna for having such a good time during our meetings. We grew together so quickly and became such good friends. Hopefully, we see each other again soon. I need to highlight Heloisa who came to Groningen twice for a research project and undoubtedly cheered up everyone in her surrounding. Thank you, Heloisa, for being an understanding friend and a good partner in the lab.

During my time in Groningen, I met other people, who have played an important role outside of the university. From all the ones that I have not listed yet, there are Maciej, Gert, Pieter and David, who are just the right people to contact for after-work drinks and long-weekend trips outside of the Netherlands. Moreover, there are Magda, Sandeep, Valentina, Martyna, Dorith and Sonja, who all made sure that life in Groningen was never boring.

Above all, I thank my parents for always being there for me. Mum and Dad, without you I would not be the person I am today. To my sister Elena, thank you for your support and the proofreading, your opinion matters a lot to me. I am deeply grateful to know I can always lean on my family, no matter what distance is in between us.

Last but not least, my exceptional thanks to Julia for her inspiration and her love. Julia, you changed my life and made me a better person. I am very much looking forward our future together.
