Contents

Chapter 1	Introduction to the thesis	9
	<i>Part one: Assessment of the perception of music and pitch-mediated speech stimuli in cochlear-implant users</i>	23
Chapter 2	Music and quality of life in early-deafened late-implanted adult cochlear-implant users	25
Chapter 3	Self-reported music perception is related to quality of life and self-reported hearing abilities in cochlear-implant users	43
Chapter 4	Gender categorization is abnormal in cochlear-implant users	61
Chapter 5	Normal-hearing listeners' and cochlear-implant users' perception of pitch cues in emotional speech	83
	<i>Part two: Musician effect in normal hearing listeners and cochlear-implant users</i>	105
Chapter 6	Musical background not associated with self-perceived hearing performance or speech perception in post-lingual cochlear-implant users	107
Chapter 7	Musician effect in cochlear implant simulated gender categorization	125
Chapter 8	The musician effect: does it persist in spectrally degraded cochlear implant simulations?	135
	<i>Part three: The effect of music therapy and training in cochlear-implant users</i>	167
Chapter 9	The effect of musical training and music therapy on speech and music perception in cochlear-implant users	169
Chapter 10	General discussion and conclusion	197
	Summary & Samenvatting	211
	Dankwoord	219
	Curriculum Vitae	223
