Acknowledgements

This book is the result of several years of devoted study. A number of people deserve thanks for their support while I completed this project. First, I am wholeheartedly grateful to my supervisor Melinda Mills for the subtle guidance and constant support. I am indebted to her for providing me with numerous opportunities to be a part of international collaborations, research networks and several exciting research groups. Further, I am equally grateful to Rafael Wittek for his trust in me, his wisdom and the constant challenge to pursue excellence. For the first two years of this project I benefited from the feedback of Nardi Steverink, to whom I am also grateful. Nicola Barban's early work has been a source of inspiration and it was a pleasure to write a paper with him.

I would also like to thank the members of the reading committee Merrill Silverstein, Karl-Ulrich Mayer and Ute Bültmann for taking the time to read and comment on the thesis. My appreciation extends to Emily Grundy, next to the all of the members of the ALPHA group, for hosting my research stay at the London School of Economics (LSE) and for co-authoring one of the chapters of this book. I am genuinely grateful for the time, feedback and the opportunities to present several chapters of this thesis during my research visit at the Department of Public Policy at LSE.

The chapters were frequently discussed at the meetings of the Healthy Ageing, Population and Society (HAPS). I am grateful especially to Ronald Stolk, Eva Kibele, Lea Ellwardt, Tali Spiegel and Matias Reus Pons for all the comments and suggestions to the thesis.

I learned a great deal from the members of the former research group *Inequality in the Life Course* in Groningen, among them Sissi Balbo, Katia Begall, Gert Stulp, Jornt Mandemakers, Tomas Turner-Zwinkels and Felix Tropf. It was a pleasure to cooperate with so many wonderful people who generously shared their knowledge and passion for science. Patrick Präg and Lea Elwardt deserve the biggest praise for interesting discussions and helping me to find solutions to what used to seem as unresolvable problems. It was a delight to be a part of the encouraging and supportive atmosphere at the Department of sociology in Groningen and the Interuniversity Center for Social Science Theory and Methodology (ICS). Special thank you is reserved for Marijtje van Duijn, Mark Huisman and Tom Snijders for the statistical advice over the years, to Rie Bosman for the mentorship and to Saskia Simon for the overall support. During the writing of the thesis I also had the opportunity and pleasure to be involved in teaching, for which I am very grateful to Andreas Flache in particular.

A word of thanks should be extended to all my colleagues at the Department of Public Administration and Sociology at the Erasmus University Rotterdam, but most of all to Pearl Dykstra, for their help with the preparation for the defense. In addition, I am grateful to Aviva Dassen, Tineke Fokkema and Sean de Hoon for editing the Dutch

Acknowledgements

summary. I appreciate very much that Felix Tropsch and Patrick Präg were willing to serve as my paranymphs for the dissertation defense.

Thanks are also due to Mileva Gjurowska and Amalija Jovanović, my undergraduate sociology professors who encouraged me to study abroad and prompted my interest in family sociology, statistics and social demography.

The work here would not have been possible without the personal and professional growth that I share with friends. My dear friends, each of you is pursuing a unique career path that has been as a source of inspiration and guidance for me. The paper cannot hold my gratitude for your patience, kindness and support. Scattered around the world, you helped me not only to survive, but to thrive; and to do so with some passion, some compassion, some humor, and some style. I will be forever beholden to the minds that were always with me in spirit.

A sincere gratitude goes to my extended family for always encouraging me to follow my dreams, even when that meant being separated from each other. Special thank you to my brother Gorjan for designing the cover for this book, and to my beloved grandmother Ljupka for the photographs.

Lastly, thanks to my mother I was able to develop my potential to the point where I could take on the challenge to pursue a PhD. Thank you for your selflessness, trust, generosity, and guidance.
