Acknowledgements

Four years have passed quickly while I worked on this thesis, and of course I would not have been able to do this without the help of many people.

First of all, I would like to thank Karina for her support and guidance. I know it must have been frustrating at times when I was unwilling to just accept what you said and kept trying to convince you that my approach or opinion was the right one. In particular, I want to thank you for all of your confidence in me and in introducing me to many international collaborations, which were crucial for this thesis but also to me as a person. I have learned a lot from you with respect to galaxy evolution and observations, but perhaps most influential was that you showed me how important it is to express oneself correctly and how small differences in wording can tremendously alter how it is perceived.

Scott, many thanks for adopting me in your group from the first day at the institute. I really enjoyed our discussions about science and everything else. I admire your scientific attitude in which you always try to look at everything from different angles and do not discard any other opinions before thorough review, and I hope I have picked up a bit from this as well.

Every thesis needs a reading committee, which has to invest precious time on it. Marijn, Peter, and Olivier, I am grateful that you were willing to read and assess this thesis.

Claudio, Eros, Gabriel, Italo, Max, and Piero, I found much joy in working with you. Your expertise has been crucial to this thesis and I fondly remember meeting all of you and discussing astronomy.

I have always been very happy that at Kapteyn everything is taken care of and I do not need to worry about any side issues, and for this I want to express my thanks especially to Christa, Martine, Lucia, Gonda, and Gineke. Further, much would not have been possible without the assistance of the computer group.

Although doing a PhD is a lot about science, I believe the environment in the institute has to be good in order to be successful. There have been a great

number of people over the years who accomplished that I always enjoyed coming to the institute, especially my office mates. Chiara, thank you for looking after me from my first day at the institute and introducing me to so many of the things going on at the institute. Alexandros, Matthijs, and Marisa, thank you for providing such a nice working spot which others sometimes described as the best office in the institute, and I do not disagree. Gergö and Katinka, although we were not exactly office mates, I am happy we were neighbours and that you often stopped by for a nice chat or discussion.

Every PhD-student or scientist needs a place to present and discuss his recent findings and thoughts in a protected setting. I found this in the different groups that I participated in and that enlightened me with topics as AGN or the IMF but who also asked me critical questions. Anaïs, Anke, Cristiana, Gerjon, Hannah, Judith, Mariya, Shoko, Sofia, Soh, and Yanping, many thanks for all questions and knowledge.

Pece, Anastasia, Nadine, I am happy we have been colleagues and friends from the beginning. We shared these four years which I will always remember and I greatly appreciate your support, honesty, and willingness to listen to my complaints. Antonino, Aku, Davide, Enrico, Francesco, Katya, Laura, Mustafa, and Stefano, without our time and fun outside of the institute I am sure I would have gone crazy, thank you for all the sports, games, and drinks. Ajinkya, Filippo, Jaco, Manolis, and Leon, I enjoyed our conversations about work and everything else, they made me think and gave me new insights.

It is great that I started studying physics and astronomy 10 years ago, and that in that time I got much support from the friends I made there. Arthur, Ellen, Frank, Hanneke, Jantien, Joris, Maarten, and Loek, thank you for the great time and supporting me throughout my study and PhD by showing what to do and what not to do.

Zonder alle steun, stimulering en geduld van mijn ouders had ik nooit zo ver gekomen. Van jongs af aan hebben zij mij meegenomen naar wetenschapsfeesten, mij uitgedaagd met kennis en mij het belang van onderwijs bijgebracht. Daarnaast stonden mijn opa en oma altijd klaar voor mij en Daan, van 9 uur 's ochtends tot laat in de nacht. Zij hamerden erop dat ik goed mijn best zou doen op school en dat je dingen altijd af moet maken, lessen die ik niet altijd even goed uitgevoerd heb, maar waar ik veel waarde aan hecht.

Als laatste Maartje, dankjewel dat je mij naar Heidelberg en Groningen bent gevolgd voor de sterrenkunde en er altijd voor me bent. Ik ben gelukkig dat we nu weer samen thuis in Amsterdam kunnen wonen.
