Biobased, thermoreversibly crosslinked polyesters

A styrene-free alternative to currently employed resins

Martijn Beljaars

Printed by: Gildeprint on FSC certified paper

The work in this thesis was performed at the department of chemical engineering, part of the Engineering and Technology institute Groningen. University of Groningen Nijenborgh 4, 9747 AG Groningen, the Netherlands.

This work is part of the Biobased Performance Materials research program, project no. BPM-052 "BIOCRES", and financially supported by the (former) Netherlands Ministry of Economic Affairs, Agriculture and Innovation.

Table of contents

Chapter 1	
Introduction.....	9
Chapter 2	
Bio-based aromatic polyesters reversibly crosslinked via Diels-Alder reaction.	39
Chapter 3	
The effect of molecular weight on the (re)-processability and material properties of bio-based, thermoreversibly cross-linked polyesters	65
Chapter 4	
Enhancing the impact properties of two Diels-Alder functionalized polymers trough blending	89
Chapter 5	
The influence of amount and type of crosslinker on thermal and mechanical properties of a thermoreversibly crosslinked biobased polyester.....	111
Chapter 6	
Closing the chain: a technological assessment	131
Summary.....	149
Samenvatting.....	153
Acknowledgements	157
List of publications.....	161
Conference proceedings.....	163
