ACKNOWLEDGEMENTS

Up until the last few months (or weeks maybe) of my master research in Tamalika's group, I've always said I would never do a PhD. Four years later, I'm writing this.

For this I have to thank Tamalika and Maria Loi, my master and bachelor thesis supervisors respectively. They both believed in me and convinced me to pursue a PhD degree. I'm grateful for their trust in me and I want to thank Tamalika for offering me a position in her cozy group. Although doing research can be difficult and frustrating at times, Tamalika always tried to keep spirits up by organizing regular group lunches, dinners and outings.

Bart and Caspar I want to thank for their critical comments, questions and taking the time to discuss results.

Next I want to thank the members of my reading committee: Prof. Dash, Prof. Ghosh, and Prof. Noheda Pinuaga for taking the time to read my thesis. I also want to thank Prof. Ghosh and the other collaborators: Anindita Sahoo, prof. Saha-Dasgupta, Dhani Nafday, prof. Mostovoy and Arunesh Roy of my Indian-Dutch bilateral project for the great times. It was very nice to work with you and to get an opportunity to experience India. Thank you for the useful discussions during our meetings. Anindita, thank you for the samples and more discussions. Arunesh, thank you for increasing my theoretical understanding. Discussing with you allowed me to see the challenges of explaining experiments to a theorist and it forced me to think differently.

Kumar, my first student right from the start of my PhD. Thanks to you I had to quickly transition from being a student into a teacher, which was not always easy, but you helped me grow. Thank you and good luck with your PhD.

Vikram, thank you for the great time while you were here. You were a very fast learner and after a few weeks I had to bring my A game to keep up with you. Unfortunately you chose the dark side of financial consulting afterwards. Hopefully you'll use your talents for a better cause in the future.

Firoz, you quickly learned how to make some complicated devices and got some results. Impressive, seeing how short a bachelor project is.

Crystal, it was very nice to work with you. You are a very kind and thoughtful person. Unfortunately I got some motivational problems, but don't take that personally, it has nothing to do with you. I wish you all the best during your PhD.

Jasper, thank you for helping me with my first spin valve measurements and the helpful advice. Your calm and patient answers helped me a lot.

Paul and Marcos thank you also for the help with measurements, advice and keeping spirits up in and around the department.

Herman, Tom and Johan thank you for all the technical support during all those years. I can imagine it is not always easy being surrounded by a different generation. However, I've enjoyed talking with you guys and getting a different perspective on things.

A big thank you goes out to Christian, Eric, Ludo and Sander, with whom I had countless conversations when my motivation for continuing my PhD was very low. It means a lot to me that you guys cared so much. Thank you for helping me through this difficult period with so much advice and lending a listening ear.

Continuing with the more joyful events: a conference on Hawaii. In my opinion

that was not even the best part. The best part is that I got to spend three weeks with an amazing group of people. Thank you Eric, Sander, Nynke and Jasper for the unforgettable moments on this faraway island. We went as colleagues, but returned as friends.

Ludo, it seems as if no challenge is too big for you, both in the office and outside. I really liked working with you and enjoyed the moments outside work even more. Discussions with you, about random subjects, were always fun and challenging. It often provided me with new perspectives. Also your presence at circuit training pushed me further. No offence to the others! I'm glad to have you by my side during my defence.

Sander, I regret that we did not start working together earlier. I really enjoyed those last months. The beginning was a bit hard, because you poured so much information over me in your enthusiasm. Luckily I got the hang of it after a while. Finally, your sense of humour made working together a real pleasure.

Eric, after you told me that you would stay in the group, it was hard for me to say no. Unfortunately we never worked on a project together directly, nevertheless I really enjoyed working with you when we got the chance. Your willingness to help and assist me whenever needed is very much appreciated. Also I will cherish the memories of the many parties we visited over the years.

Martijn, thanks for all the help during my PhD. You were always there to help. I will have fond memories of us haken like idiots at parties. After Eric leaves, with whom will you dance like crazy on Vlieland?

Nynke, one of the best colleagues I could wish for and had the pleasure of sharing an office with during most of my PhD. Maybe this was not the best thing for our productivity, but talking to you was always so enjoyable. It was usually hard to get back to work. One of the things I will remember is how talking to you was always so refreshing. You never pretended to know things, but were very clear what you understood and what not. I find it very admirable what you did during your PhD. Usually starting off with measurements you did not understand, but you always managed to churn out papers. I'm very glad you accepted to be one of my paranymphs.

Pep, you're a very good officemate to have. Always giving good advise on which papers to read and explaining concepts. Also it was always funny to see your rants when you saw a paper which used a flawed method or drew wrong conclusions.

Christian, I was heart warming to see you cared so much about me and tried to prevent me from making stupid decisions. I hope you try to find happiness in the present, instead of focussing on the future.

Saurabh, thanks for all the support over the years, both mentally and technically. It was always fun talking to you, which often revolved around food it seemed.

Ewout, you were a welcoming addition to the group, which I shall not forget. Your enthusiasm is so enticing and it was a blast getting to know you.

Master room students: Arjen, Bart, Carmem, Feitze, Jeroen, Symen and Tian thank you for the support and the thoughtful gift during my short stay in the master student room. I enjoyed it!

Thank you (former) members of FND for making the group to what it is and all the support: Aisha, Alexey, Arijit, Danny, Eek, Fasil, Gaurav, Geert, Gerjan, Ivan, Jakko, Jantje, Joost, Jing, Juan, Julian, Juliana, Madhu, Magda, Mallik, Niko, Olger, Ping, Sander Onur, Sid, Subir, Talieh, Timo, Tom, Xu.

Also a word of appreciation to the open source software community, people who

answer questions on websites such as StackExchange & StackOverflow and Ankit Rohatgi who developed the WebPlotDigitizer. Without your freely available work and answers, so many things would become a nightmare. Thanks

Diane Black, who taught the Publishing in English class, I want to thank you for the great course. Writing has never been my strong suit, but during your course it was as if something finally clicked and I started to understand writing concepts. Thank you for this.

Nicolien Wieringa, who also helped me during my difficult times. From our conversations I learned so much about myself that suddenly a lot of things in my life made sense. Thank you for these insights and helping me getting to know me.

Henk and Iné and Jonathan, thank you for all the support during these years. Thank you Tom, Armin, Lucas and Oscar, who were always there to make fun of me and all the misery during my PhD.

Finally: Isabelle. Thank you for all the support during all these years. Without you it would be even harder to finish my PhD. It must have been difficult when you saw my struggles and there was not always something you could do. That did not stop you for trying though. Thanks for that! I'm looking forward to a future together in Switzerland, or anywhere for that matter.

While writing these acknowledgements I've come to realize how much I relied on other people to complete my dissertation. In a similar vein, Newton also realised this when he said: "If I have seen further, it is by standing on the shoulders of giants.". Although I think it is not only the giants who help you. There are countless pieces of advise and knowledge from different people and previous generations, which by themselves seem small, but when added up are a major contribution. Thanks!

Roald
