## Acknowledgements

PhD is a product, not just of a single person but rather a group of people constantly motivating the candidate towards accomplishing the goal of defending a thesis. I would like to first thank my supervisors Prof. Dr. Rainer Bischoff and Prof. Dr. P.L. Horvatovich for giving me the opportunity to perform my PhD at the Analytical Biochemistry group in the University of Groningen and for their constant guidance. The meetings with you were always constructive and as a result my research work benefited greatly. Apart from the meetings and discussions, I would like to thank you for helping me to structure and add analytical value to all my manuscripts, which was fundamental for my thesis work. I would also like to deeply thank my promoter Prof. Dr. A.K. (Age) Smilde at the University of Amsterdam, who often provided very valuable and constructive feedback for my manuscripts. Many thanks to Gooitzen for explaining and helping me with the ASCA part. I would like to express my gratitude to the Netherlands proteomics centre for providing the grant for my PhD.

Thank you Peter for your daily supervision and continued guidance even after I left Groningen. At times it was difficult to communicate through e-mails and Skype conversations but this thesis would have never materialised without your support and critical assessment.

I would like to deeply thank you Jolanda, for helping me with administrative issues.

My colleagues at the analytical biochemistry department, Christin, Eslam, Julien, Therese, Berend, Alex, Lorenza, Sarah, Jos, Laurette, Turan and Daniel, I would like to thank you for all the insightful discussions on scientific and less scientific affairs.

Apart from the research activities at the University, I had a great social environment during my stay in Groningen. I would like to thank all my friends in Groningen for the various gigs, pub visits and cycling trips. Thank you Hanna for explaining me some of the Dutch customs and traditions. I would like to especially thank Hans, Pranav and Vaishali for making me feel at home away from home. I would like to express my gratitude to Naeema Bhabhi and Ishtiaq-mia for helping me out on practical aspects of living in Groningen.

I'm really grateful to Ian and Malcolm at Proteome sciences for offering me the bioinformatics role and being considerate towards my PhD tenure. Michael, thank you for your thoughtful suggestions and for being the best office buddy ever. I would like to express my gratitude to

my colleagues in London – Claire, Emma, Dave, Ella, Irene, Valar, Richard, Hui-Chung and Steve for your inspirational comments. Wishing you all the very best for the future.

Amit and Sanchita di, thank you for your support, love and care in London. Thanks to my friends in Cornwall, MD, Amrita and Tony, for constantly encouraging me to complete the thesis. To my friends, Antonella, Khadiga, DD and Vishal, I feel I wouldn't have been able to complete the thesis without your timely motivation, so thank you.

I would like to thank my family for being supportive and encouraging me throughout my PhD tenure. First of all, I would like to thank my grandmother, Didi for all her prayers and blessings. Ma, Baba and Ronnie thank you for helping me in achieving my dream of obtaining a PhD. Mama and Mami, thank you for motivating me to pursue my post-graduate studies. Ayesha and Raina, I'm really honoured to have both my cousins as MIT graduates, so thank you for being a big inspiration. Thank you Kaka and Kaki ma for making me realise that one should cherish the finer moments in life too. Thanks to Mummy, Rohit and Varsha for encouraging me and Papa for constantly motivating me to complete my thesis.

I have been fortunate to have met you, Ritika, my wife. You have been supportive and helpful at all times. I couldn't have asked for a better life partner and I feel fortunate to have you in my life. A mere thank you is the very least I could say.

I would like to dedicate my thesis in the memory of my maternal grandfather, Dilip Kumar Bose, who we sadly lost in the beginning of 2016, and to my paternal grandparents, Dadai and Didu. Although I wish they were all alive today to witness the successful completion of my PhD, I take solace in the thought that they will always be watching over my scientific career.
