How Urban Green Spaces Relate to Health and Well-being

The interplay between green space attachment,
perceived quality and affordance

The research presented in this thesis was conducted at the Faculty of Spatial Sciences at the University of Groningen. The author was funded by China Scholarship Council.

How Urban Green Spaces Relate to Health and Well-being

The interplay between green space attachment,
perceived quality and affordance

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. E. Sterken
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Thursday 29 June 2017 at 14.30 hours

by

Yang Zhang

born on 1 August 1988
in Liaoning, China

Supervisor

Prof. A.E. van den Berg

Co-supervisors

Dr. T. van Dijk

Dr. S.G. Weitkamp

Assessment Committee

Prof. T. Haartsen

Prof. C.H. Mulder

Prof. M. Bonnes

Contents

List of Tables and Figures	V
1 Introduction	1
1.1 Background.....	2
1.2 Concepts for a relational perspective on urban green space: attachment, perceived quality and affordance	5
1.2.1 Green space attachment	5
1.2.2 Perceived quality of urban green spaces	6
1.2.3 Green space affordances	6
1.3 Methodological approach	7
1.4 Thesis outline.....	8
References	10
2 The Relational Dimension in Urban Green Places	15
2.1 Introduction	17
2.2 Methods	18
2.3 Results	19
2.3.1 Descriptive analysis of the reviewed studies	19
2.3.2 Green space measurement.....	25
2.4 Discussion.....	29
2.4.1 Imbalance of green space measurement in these studies	29
2.4.2 Redressing the positivistic prevalence: from space-thinking to place-thinking	31
2.5 Conclusions: proposals for future research to embrace urban green place-thinking	35
References	37
3 Green Space Attachment and Health: A Comparative Study in Two Urban Neighborhoods	51
3.1 Introduction	53
3.1.1 Green space availability and health	54
3.1.2 Place attachment	55
3.1.3 Green space attachment: a four-dimensional concept.....	56
3.1.4 The present research and hypotheses	58
3.2 Methods	59
3.2.1 Neighborhood selection approach.....	59
3.2.2 General description of the two selected neighborhoods	60

3.2.3 Green space characteristics	62
3.2.4 Survey design.....	64
3.2.5 Data analysis	65
3.3 Results	66
3.3.1 Descriptive statistics	66
3.3.2 Manipulation check: perceived availability of green space	67
3.3.3 Green space attachment	67
3.3.4 Green space attachment and health by neighborhoods	69
3.3.5 Structural equation model	70
3.4 Discussion.....	71
3.4.1 Green space availability and green space attachment	72
3.4.2 Health differences	73
3.4.3 Other predictors of green space attachment and mental health.....	74
3.4.4 Limitations and suggestions for future research	74
3.5 Conclusions and policy implications	75
References	76

4 Quality over Quantity: Contribution of Urban Green Space to Neighborhood Satisfaction	85
4.1 Introduction	87
4.2 Methods	89
4.2.1 Study design.....	89
4.2.2 Questionnaire and measures.....	91
4.2.3 Sample.....	92
4.2.4 Data analysis	93
4.3 Results	93
4.3.1 Neighborhood satisfaction and overall well-being	93
4.3.2 Perceived quality and beneficial affordances of green spaces	94
4.3.3 Mediation analysis	95
4.4 Discussion.....	96
4.4.1 Perceived green space quality and beneficial affordances of green space.....	96
4.4.2 Neighborhood satisfaction and well-being	97
4.4.3 Limitations and recommendations for future study	98
4.5 Conclusions	99

5 Green Space Attachment and Its Interrelations with Neighborhood Attachment, Connectedness to Nature, and Quantity and Quality of Green Spaces: A Construct Validation Study	105
5.1 Introduction	107
5.1.1 The measurement of green space attachment.....	108
5.1.2 Green space attachment and neighborhood attachment	109
5.1.3 Green space attachment and connectedness to nature.....	110
5.1.4 Indicators of neighborhood green space	111
5.2 Methods	111
5.2.1 Survey and respondents	111
5.2.2 Measures	113
5.2.3 Analysis.....	115
5.3 Results	116
5.3.1 Reliability analysis.....	116
5.3.2 Confirmatory factor analysis.....	116
5.3.3 Relationships between green space attachment, neighborhood attachment and connectedness to nature	117
5.3.4 Relations of green space attachment with the quantity and quality of neighborhood green spaces.....	119
5.3.5 Relations among neighborhood attachment, connectedness to nature, green space quantity, green space quality, and visiting frequency.....	119
5.4 Discussion.....	120
5.5 Conclusions	122
References	122
6 The Environmental Affordances of An Urban Park: Relationships between Design and Seniors' Use of Green Spaces.....	127
6.1 Introduction	129
6.1.1 Affordance and urban green space.....	130
6.1.2 The importance of parks for older adults	131
6.1.3 The present research	132
6.2 Methods	132
6.2.1 Study Location	132
6.2.2 Interviews.....	133

6.2.3 Behavior mapping	134
6.2.4 Data analysis	135
6.3 Results	136
6.3.1 Interview outcomes	136
6.3.2 Behavior mapping	140
6.3.3 Daily-use patterns	145
6.3.4 Affordances	146
6.4 Discussion.....	152
6.4.1 Strengths and limitations.....	153
6.4.2 Practical implications	154
6.5 Conclusions	155
References	155
7 General Discussion	159
7.1 Introduction	160
7.2 Main findings.....	160
7.3 Discussion.....	162
7.3.1 Green space attachment	162
7.3.2 Green space affordance	164
7.4 Implications for policy and practice	164
7.5 Reflection on research methods.....	166
7.6 Recommendations for future research	167
References	168
Summary	171
Samenvatting	175
Acknowledgements.....	179

List of Tables and Figures

List of Tables

Table 2.1	Authors, study locations, health outcomes measured, and green space measurement from 95 reviewed studies.
Table 2.2	Green space measurement in the studies reviewed.
Table 3.1	Characteristics of the two neighborhoods calculated from GIS and census data (Statistics Netherlands, 2011).
Table 3.2	Overview of inaccessible and less usable green spaces in the two neighborhoods.
Table 3.3	Self-reported socio-demographic statistics of the participants from the two neighborhoods.
Table 3.4	Measurement model of second-order factor green space attachment.
Table 3.5	Mean scores on dimensions of green space attachment and health measures in the two neighborhoods (range 1–5, standard deviations between brackets).
Table 4.1	Mean adjusted scores (with Standard Error between brackets) in the two neighborhoods, with results of statistical analyses (controlled for age, length of residence and income).
Table 5.1	Overview of items of the Green Space Attachment Scale.
Table 5.2	Correlations of Green Space Attachment (GSA) and its sub-dimensions with Neighborhood Attachment (NA) and its sub-dimensions, Connectedness to Nature (CN), and quantity, quality and visiting frequency of neighborhood green space. Reliabilities (Cronbach's alpha) are provided for each (sub)scale.
Table 5.3	Correlations among neighborhood attachment (NA), connectedness to nature (CN), the quantity of neighborhood green space (Quantity GS), the quality of neighborhood green space (Quality GS), and visiting frequency.
Table 6.1	Environmental characteristics favored by senior park users and their frequencies.
Table 6.2	Environmental characteristics disliked by senior park users and their frequencies.
Table 6.3	Overview of park affordances for seniors with supporting and non-supporting environmental features.

List of Figures

- Figure 3.1 The neighborhoods of De Hoogte (north); and Corpus-Noord (south).
- Figure 3.2 Impressions of green spaces in the two neighborhoods: Green space next to the highway in Corpus-Noord (left); and the highway next to the residential area in De Hoogte (right).
- Figure 3.3 Standardized results of the structural equation modelling.
- Figure 4.1 Summary of the procedure of neighborhood selection.
- Figure 4.2 Mediation model showing the effects of neighborhood (0 = De Hoogte, 1 = Corpus-Noord) green space on neighborhood satisfaction, as mediated by the average perceived quality of green spaces.
- Figure 5.1 Map of residential locations of the participants, based on 4 and 6 position postal codes ($N = 224$). Source: BatchGeo
- Figure 5.2 Standardized results of the confirmatory factor analysis.
- Figure 6.1 Aerial image of Xingqinggong Park, in Xi'an City, China, with the locations of three observational mapping places.
- Figure 6.2 Impressions of the three behavior mapping place: The eastern part of Nanmen Square (P1, upper left); The exercise forest (P2, upper right); The Changqing pavilion (P3, bottom). (Photos by the first author).
- Figure 6.3 A composite map of observation Place 1.
- Figure 6.4 A composite map of observation Place 2.
- Figure 6.5 A composite map of observation Place 3.
- Figure 6.6 Users of P2 on Monday, October 12, 2015, 9:30 am. It is a sunny morning with a slight breeze.
- Figure 6.7 Ropes tied between trees to strengthen the buffer area among group activities.
- Figure 6.8 Users of P1 on Sunday, October 11, 2015, 9:00 am. It is a sunny morning with a slight breeze.
- Figure 6.9 Average number of senior participants at observation places P1, P2, and P3 on three sunny days, based on six observation blocks.
- Figure 6.10 Examples of individual activities: Aerobic practice (left) and ground calligraphy-writing (right).
- Figure 6.11 Examples of group activities: Dancing practice (left) and Tai Chi practice (right).

Figure 6.12 Examples of protection against unpleasant weather conditions and social interactions: A singing group on a rainy day (left) and indirect interaction (right).

Figure 6.13 Examples of sitting and resting: A sitting place with trees and edges (left) and a sitting place with a broad view (right).
