Acknowledgements

Now it is time for the non-scientific summary of my four-year life as a PhD candidate. At first blush, this small chapter at the end of the thesis contains the only list of names, but there are many memories and emotions behind each of them.

First of all, I would like to thank my promoter, **Prof. Maria Antonietta Loi. Maria**, you were the member of the admissions board when I first time came to Groningen for the Top Master Programme interview; today, six years later, you are the member of my PhD Examining Committee. Thank you for having enormous strength and patience to supervise me in my Master and PhD projects for such a long time. Your guidance, support, and inspiration helped me to feel comfortable and stay on track even in the most difficult moments. I have learned a lot from you and I enjoyed being a member of POE group.

I also want to use the occasion to thank the members of my reading committee, **Prof. Petra Rudolf, Prof. Enzo Menna** and **Prof. Yong-Young Noh** for evaluating the thesis.

This research project would not be possible without my collaborators. I would like to thank **Prof. Ullrich Scherf, Dr. Sybille Allard, Martin Fritsch, Nils Fröhlich, and Stefan Jung** for synthesizing the polymers; **Prof. Maria Cristina dos Santos** for performing the simulations.

Marianna Manca, I asked you to be my paranymph and you immediately accepted the offer, but the truth is, none of us had a choice :) It is a pleasure for me to call you "friend" and I will always remember our trips (including your favorite - kayaking), late-night healthy dinners in university, jogging, and pretty good tiramisu. I am very happy that you will be supporting me on such an important day of my life.

Artem Shulga, we know each other for a very long time and it is not a surprise that I asked you to be my paranymphs. Thanks for sharing all happy moments with me in the past 14 years, and I am sure we will have even more fun in the future!

I would like to thank **Jia Gao** and **Satria Zulkarnaen Bisri** for supervising my Master project. **Jia**, you were the first person who introduced me to the world of carbon nanotubes.

I had so much fun doing my short scientific project under your supervision that I decided to continue the project as a Master student. **Satria**, thank you for enormous help during my master research and for the time you spent correcting my master thesis.

I am very grateful to **Arjen Kamp, Teodor Zaharia, Frans van der Horst** and **Jan Harkema**. Without your technical support, this work would not have been possible. **Arjen**, it was always a pleasure to listen to your stories and new business ideas during the lunches! I would like also to thank our secretary, **Renate Hekkema**, for administrative assistance.

Jorge Mario Salazar Rios, you are a great friend, thanks for help and support, both at work and outside of working hours. You are the person who pushed me to start learning Spanish and opened to me a charming world of Latin American culture. I really enjoyed the time spent in Colombia with your friends and family.

Bart Groeneveld, I enjoyed being your office mate and friend a lot! Don't forget, we still have unfinished business together, our jam session) Also big thanks for translating the summary of my thesis to Dutch! I know you wanted to sneak one word in my summary, but in the end, you didn't. That's why I put it here for you: "koolstofnanobuisveldeffekttransistoren".

Daniel Balazs, difficult to find the word to describe your unique role in POE group. You definitely make the group more alive and vivid. Thanks for being perfect mate during our trip to Colombia; and our trip to Bospop festival alone is worth a lot!

Konstantin Balinin and **Mykhail Gerasymenko**, we had so much fun! I will never forget us baking cakes in the night before my birthday, or our training sessions at ACLO! There are too many cool stories with both of you, to mention them here!

Widi and **Lai Hung**, I was very happy to share the office with you, beside that we also had many amazing trips together. I really enjoyed our discussions about science and life.

Dima and **Natasha**, thanks for answering to all my chemistry-related questions and for interesting chats in our free time. **Natasha**, all those cakes you bake for the group dinners are gorgeous! **Dima**, we had many interesting and useful discussions in the office and I learned a lot from them.

Simon, even though you preferred to stay in Germany most of the time (Swedish guy in Germany), we had an enormous amount of funny stories in last 2 years. I for sure will miss your every-day puns on the board in our coffee room.

Musty, you are the style icon of our group! I am still amazed by a number of colognes you can distinguish!

It would be too long to mention all the names of the many friends, who have shared in one or another way the last 4 years with me. I would like to thank all of them for their contribution to my stay in Groningen!

The most important thing in my life will always be family. It is not possible to describe in words how much my parents have supported and believed in me and all my decisions. I am, therefore, very grateful to my parents **Tatiana** and **Yurii** for always being there for me, despite the physical distance between Ukraine and the Netherlands. My sister and brother in law, **Irina** and **Yurii**, I am very happy that we have each other. Your family with two gorgeous kids, **Maria** and **Mark** has been a source of happiness to me. Last but certainly not least, I want to thank **Liliana** for entering and being in my life. Your love and support have provided me continuous inspiration to complete the last part of this research and finally this thesis.
