Acknowledgement

This thesis would not have been completed without the help of many people. Therefore, I would like to take this opportunity to thank each and every one of you.

First I would like to express my sincere gratitude to my promotor **Prof. Dr. J.Th.M. Plukker** and co-promotor **Prof. Dr. R.P. Coppes**.

Prof. dr. J.Th.M. Plukker, Dear John, the road to success comprises not only of hard work and intelligence but also a good portion of luck. Luck is perhaps even more crucial. I feel extremely lucky to have met you as a first year medical student. Although, back then, I had little knowledge about science, you welcomed me with open arms in your research team. From there on, I participated in multiple research projects under your supervision ultimately leading to this MD/PhD thesis. Over the years, I enjoyed our numerous discussions. More importantly, I began to see you as my mentor throughout my study. At every major career milestone, you were by my side. You gave me your honest opinion on, I have to admit, sometimes crazy ideas, and helped me in realizing those ideas that you considered were wise. It was because of you, I was able to travel to the USA to do my scientific internship at the wellknown MD Anderson Cancer Center prior to this MD/PhD project. You were always there for me. In the good times, we shared our joy together. In the tough ones, you helped me back on my feet. I truly thank you for that and I will always cherish this experience.

Prof. dr. R.P. Coppes, Dear Rob, your excellent eye for science has always motivated me to work harder and aim higher. I learned a lot from you. As I do not have a background in biology, you taught me how to tackle basic science and to adopt a critical view. Your door was always open for me to discuss things. You gave me guidance and confidence when my data made no sense. I always have highly valued your opinion as I know you always aim for the best. Your passion for science has made me enthusiastic about continuing research even after the completion of this thesis. Besides work, you reminded me from time to time the importance of the people at home and how to improve work and life balance. It was an honor to have you as my co-promotor.

Harrie, Steven and Ody, although you are not one of my supervisors, your sharp questions during our work in progress meetings were much appreciated and made me think out-of-the-box.

This work could not be completed without my lab mates and fellow MD/PhD students who over the course of this journey became good friends of mine. **Peter**, thank you for showing me the ropes in the lab when I was a newbie. I could always come to you for help with my experiments, even until the very last day in lab. We shared great laughs. On the other hand, it was also nice to complain together about our struggles. **Cecilia**, I have always looked up to you as you are a great and strong person. Thank you for your help and the fun times. I would never forget the time in Amsterdam when you and **Peter** made me scream so hard that for a moment I thought I was going to have a heart attack! **Julie**, we clicked right away. Although I have only known you for about a year, I feel you are family. We are similar in many ways. Taking one day off to shop like a crazy person in an outlet mall across the country, just to get the Black Friday discount, would be considered as foolish behavior by many;). **Paola**, I found out that you also appreciate a good party. Although, I could never dance like you, thank you for showing me. **Lara**, I am so glad that our paths have crossed just in time. Thank you for your help and advice. **Hette, Mirjam, Anne and Nienke**, thanks a lot for your help, it was a pleasure to have worked with you. To the previous members of Rob's group, **Martti, Yamini, Sarah, Nynke and Roland**, thank you so much for the great work environment. I learned a lot from you. **Yixian**, my dear, throughout the years I really became fond of you as you can perceive things without any judgements. I always felt I could tell you the truth. **Fran-cesco**, we have grown close the past year. Thank you for hearing out my silly stories, complaints and of course my western blot questions. You always have managed to cheer me up. Your positivity and jokes will be greatly missed. **Wonde**, you are a part of one of my proudest moments throughout this journey: successfully running a western blot! Thank you for teaching me. From that point on, we became friends and shared many fun moments with each other. I will miss our UMCG dinners as well as the Ethiopian cuisine. **Despina, Yuyi, Wudi, Matteo** and others from the 5th floor at the dept. of cell biology, thanks a lot for the great times in and outside lab. To all my fellow and previous MD/PhD colleagues, **Bastiaan, Justin, Judith, Kirill, Dirk, Andries, Jorn, Willemieke, and Jan Binne**, it was great to have worked with you. Thank you all so much for creating a great work environment in which I enjoyed working every day. Wish you all the best! I will miss you all!

As mentioned before, my scientific internship at MD Anderson Cancer Center laid the foundation for my MD/PhD thesis. Hereby, I would like to thank my two previous supervisors and my lab mates there for their guidance.

Prof. dr. J.A. Ajani, dear Jaffer, thank you for making the Texan culture shock more durable for me in my first days by making me feel at home. You are a great person as well as you are a scientist. I feel extremely proud to say that I have worked with you!

Prof. dr. M.-C. Hung, dear Mien-Chie, the first moment I met you, I knew right away that your lab would be my home for the entire year. Thank you for taking a chance on me. You are a truly great scientist and an example for many. You have inspired me to further pursue basic science after my internship!

Alice and Stanley, my daily supervisors, I gained so much knowledge and experience from you. I will never forget that. I cherish our friendship and hope to visit Purdue University and Taiwan soon!

James, Chao-Kai, Sandra, Aarthi, Rose, Tina, Claire, Yi-Hsin, Ming-Chuan, Pamela, Dr. Wang, Dr. Qiu, Dr. Fang, Dr. Ke and Dr. Wu, without you I would not have survived in Houston. Thank you all for being there for me. I have such great memories from my time there. It is because of you, Houston still feels like home proven by my second visit after my internship. It was like I never have left! I feel very blessed to have you as my friend. Although we are scattered around the world now, I am sure we will see each other again in the future!

Leonie, Geerte, Martine, Janne, Zhihong and Selina you are my oldest friends. We have been through so many significant and dear moments in life. I feel so blessed to have you on my side. Although keeping contact is sometimes tough due to our busy schedules, I know that no matter how long it has been, I can always pick up the phone to hang out with you. That is a true friend!

Marjolijn, Sigrid, Merle and my coach group during my medicine study: **Wineke, Naomi, Jelle, Marjolijn, Wouter, Thomas, Casper, Lieve, Ellen, Janneke and Natasja**, it is great to have friends to talk to in difficult moments who help you back on your feet.

My (ex-)housemates, **Corine, Marinka, Burcu and Claudia**, with you I can always goof around and party. I will never forget our legendary nights at Twister!

Lucie and Ewald, I have known you for almost my entire life in The Netherlands. What began as weekly tutor classes on the Saturday to improve my Dutch, flourished soon into a beautiful friendship. I enjoyed our talks and still enjoy my visits.

To all the doctors at the department of gastroenterology who helped me obtain esophageal cancer biopsies, **Dr. W.B. Nagengast, Dr. H.M. van Dullemen, Drs. A. Bijlsma** and all the ladies at the secretary, thank you so much for your help and kindness.

Drs. A. Karrenbeld and Prof. Dr. H. Hollema, thank you for making time to review immunohistochemical slides with me.

Thank you **Petra Nijnuis** for making my appointments with John!

Dear **Dr. H. Rakhorst, Dr. E.O. van Kooten and Dr. S. Hamburg** at Medisch Spectrum Twente, your passion for your work has made me realize that plastic surgery is my career of choice instead of medical oncology. Thank you for your supervision during my internship and I hope our paths will cross again in the near future.

To my new colleagues at Maastricht University Medical Center: Thank you for the excellent work environment where I enjoy working every day!

Dear **Gerrit, Truus, Lisette, Sjors, Luuk, Richard, Aliejanne, Sterre** and **Thomas**, they say you never get to choose your family in-law. That might be true, but I feel very fortunate to have you in my life. Thank you for welcoming me warmly into your family. I apologize for the many missed birthday parties and family moments. I hope I can attend more in the future.

Dear **Helena**, my sister, I feel so lucky to have you in my life. Although we are nine years apart, perhaps due to this, we always get along and I always feel protective over you. You can always count on me. You

have a very bright future ahead of you!

Dearest **Li Hua Jiang** and **Hui Qi Wang**, my mom and dad, early on you made the decision to grab the chance to move to The Netherlands when you got invited by the University of Groningen for work. The Netherlands is a country where you thought a better future would be created for your children. Although our first years were tough, you never gave up on this idea. In my opinion you now have achieved this and beyond. Your ever strong work ethics have led to the things we have now. It is probably how I inherited my core values 'work hard' and 'aim high'. You built up a life from scratch and I greatly appreciate the opportunities that you have created for me. In every step of the way you gave me support and advice. I could not have done this without you. From the bottom of my heart, I thank you.

Dear **Eduard**, my love and my best friend. You did not back off when we encountered hard times. Instead, you reassured me and offered me a shoulder to cry on. I admire the huge empathy that you have. You let me pursue my dreams and moreover you supported me in every possible way. Thank you for making the figures of my articles, the design and lay-out of this thesis. We have achieved this together.
