ACKNOWLEDGMENTS

This thesis was a product a long journey, that gathered many people that I would like to thank. Firstly I would like to express my sincere gratitude to both my scientific advisors Thomas Jansen and Jasper Knoester for the continuous and sustained support during my Ph.D research. Jasper and Thomas I would like to thank you for giving me the opportunity of doing a Ph.D in your group. It was a privilege to be supervised by you, but above all I would like to thank you both for your patience and guidance. Thomas, I still remember the day that I chose to do my Ph.D with you. I was absolutely fascinated about infrared red spectroscopy of aquaporins. Even though the closest we got was bulk NMA I have to thank you for your dedicated supervision, which was crucial for my scientific development. Above all, I must thank you for disagreeing with me, because this gave me the needed thick skin and the critical thinking regarding my own work.

I would also like to thank to the molecular dynamics group, specially to Alex de Vries and Manuel Melo, with whom I had very interesting and challenging scientific discussions. Thank you for being always available to discuss science with me. Alex I will always remember to take a look into the code.

A very special thanks goes to the theoretical chemistry group, in particular to Ria Broer and Shirin Faraji, who always made me feel like I was home, specially in the most difficult moments. Ria I have met you in Porto, and even though it seems like yesterday five years already passed. I remember talking with you about coming to Groningen to do my Master research. You were immediately friendly, and with the years you have shown to be supportive, treating the students fairly and taking into consideration their needs as humans. Even though busy, you always have time to listen. Above all you always have a friendly word or a nice gesture for those who need. It was a privilege to be a part of your former group. Shirin, it was a great pleasure to get to know you. Even though I am not a part of your group, you have always treated me as such, showing a great support and comprehension. I can only thank you for your sustained support. Wim Nieuwpoort and Piet van Duijnen thank you for the wonderful and dynamical discussions during the lunches. In this group I have made good friends with whom I had a wonderful time and to whom I am

very grateful: Andrii Rudavskiy, Hilde de Gier, Luis Suarez, Selim Sami, Maria Izquierdo, Gerrit-Jan Linker, Riccardo Alessandri, Kathir, Fabian Grünewald, Federica Frati, Cecilia Gomez, Abuzer Al Hamza, and Marije Haeck.

I am very grateful to all the people with whom I have collaborated, namely to Sander Woutersen, Robbert Bloem, Peter Hamm, Halina Tran, Christoph Salzmann, Huib Bakker, Oleg Selig, and Yves Rezus. Maxim S. Pchenitchnikov thank you for the wonderful scientific discussions. A special thanks goes to Evgeniia Salamatova my closest and direct collaborator, and with whom I have enjoyed many nice dinners and conversations.

I would also like to thank all the current and former members of my group: Niels van der Vegte, Roel Tempelaar, Anna Bondarenko, Tenzin Kunzel, Jasper Compajen, Wijnand Broer, Alessio Pozzi, Anna Stradomska, Eric Bloemsa, Marwa Farag, Arunesh Roy, Frank Haverkort, Maria Azhar, and Binturo Nugroho. A very special thank you goes for Iris and Annelien, with whom I had very nice conversations. Thank you for always being available. To my office mates Pi and Femke : Thank you for all the nice moments and all the laughters. Joana and Pi thank you for being my paranympths.

Even though not directly related with my Ph.D I would like to thank to Maria Joao Ramos, and Alexandre Magalhães from the group of theoretical chemistry of the University of Porto. I remember I was a bachelor student when I had a lecture of Computational Biological Chemistry and we were being taught about the possibilities of understanding molecular structure using computers. Back then I had a crush on organic chemistry and synthesis, and therefore I was skeptical regarding the power of computational chemistry. The day came when we performed a geometry optimization with Gaussian on a tutorial class. Then I understood that there was new world of chemistry to explore, a world that did not include vessels, pipettes, and the bad smell of reactants. Here I thank you 1000 times for opening my mind to theoretical chemistry, and to have given me the opportunity of being a Master student in your group. It was a privilege and an honor to be taught by you.

Last but not least, I would like to thank my family that supported me unconditionally through the years. To my close friends, with whom I lived moments of great happiness, and whose names do not need to be mentioned, I can only say: There are not enough words to express my sincere gratitude.

I shall dedicate this last paragraph to my parents and to two small special human beings-my nephew and niece. A sincere and honest thank you to the pillars of my life: my father and mother that loved me unconditionally. Pedro

and Leonor, by the time that you will be able to read this I will be old, but I will not allow you to say that I am old. Even though far you are always in my heart.
