Acknowledgements

At the end of this thesis, I would like to spend some words to show my gratitude to all the people that were part of this once-in-a-lifetime (hopefully) adventure of my Ph.D. journey. First and foremost, I would like to thank my two supervisors, **prof. Ton Groothuis** and **dr. Bernd Riedstra**, without whom I can never stand where I am now. Back in the midsummer of 2018, when I had almost made up my mind for another Ph.D. project in the UK, Ton generously offered the opportunity to me and successfully convinced me to join his group to perform this Ph.D. project at the University of Groningen, the Netherlands. Ton is quite good at persuasion, as I later learned during our countless discussions over my manuscripts, but I would say that I never regret my decision.

It was quite challenging for me, a former medical student with little research experience and who had never lived overseas, to start my Ph.D. I, therefore must thank **Ton** and **Bernd** for their general and patient guidance in this field to me. And of course, thank you for your patient instructions on my experiment design, lab work as well as my English writing. Besides, thank you for all the mental support which often give me hope and made me move forward. **Ton**, your well-thought comments and challenging questions always encouraged me to step out of my comfort zone, learn to defend my ideas, master new techniques, and think more critically. **Bernd**, your brilliant ideas and rich experience in lab work helped me a lot, and you are also the one that enlighten me to think out of the box. Together, I truly see you trying to make me a better and more independent scientist and also a more confident person.

I need to next thank all the technicians that helped me throughout my Ph.D. journey. Thank you, **Bonnie de Vries**, for your meticulously cautious attitude towards every experiment and systematic management of all experiment materials. You taught me by action what is better safe than sorry. Thank you, **Gerard Overkamp**, your enormous knowledge of those devices and equipment made my Ph.D. life so much easier. I introduce you to my master students “the technician that can fix everything”. I also should thank **Kunja Slopema** who taught me the cryostats skill and tried every way possible to help to slice a quarter pea size bursa of Fabricius with cryostats. And also thank you **Wanda Douwenga** for helping me carefully separate B cells from the bursa.

As I worked with birds during my Ph.D., I must thank all animal caretakers who work in the animal facility. In particular, **Robin Kremer** and **Saskia Helder**, thank you for maintaining and cleaning the outdoor aviaries. All the birds are well-fed and cared for.

Also, a big thank you to all the **rock pigeons** and **black-headed gulls** in the aviaries. Your eggs made up this thesis. May the embryos rest in peace.

To all my collaborators from UMCG: **Martijn van Faassen**, **Alle Pranger**, and **prof. Ido Kema**, thank you for your hard work in analyzing my hormone samples. To **prof. Bernd Kasper** from Ludwig-Maximilians University, thank you for your generous help in generating monoclonal antibodies for our gull experiments. Enjoy your retirement! To **dr. Christine Jansen** from Wageningen University, who I never met in person but who generously offered help over emails, thank you for your rich knowledge in avian immunology that made my project move forward. Last but not least, thank you, **prof. Manfred Gahr** from Max-Planck Institute for Ornithology (biological intelligence) for hosting me in your institute to do experiments, patient instructions on using the cryostats, and of course your contribution as a

reading committee member to evaluate my thesis.

Thank you to the other member of the reading committee: **prof. Gertjan van Dijk** from University of Groningen and **prof. Rachal Bowden** from Illinois States University for reading and evaluating this thesis.

I would next thank all the people in my group. **Neeraj Kumar**, you took me by my hand into my Ph.D. journey. As a former Ph.D. student of the group and a critical thinker, you gave me so much help in my study thought out our discussions. You are also a good listener and always try your best to help. I enjoyed each and every conversation we had! Thank you, **Tom Sarraude** and **Martje Biker**, for your help with the general additive model (GAM) approach. I would always remember all those group meetings where we discussed the GAM on and on. Also, to **prof. Ido Pen** and **Bin-Yan Hsu**, your help with my statistical analyses are very much appreciated. Thank you, **Flavia Berlinghieri**, for hosting our group meeting and taking care of my cat while I was away, she really likes you! Thank you, **Paolo Panizzon**, you really have your wisdom and I like your calm style in scientific talks which I wish I could learn. Thank you, **Apu Ramesh** and **Jacob Gismann**, although you guys are working with fish and we do not share an office, it was always a pleasure to have your opinions during our group meetings. Thank you, **Kat Bebbington**, as a postdoc, your experience, and knowledge in the academic world are very much appreciated by me. Also, to **Asmoro Lelono** and **Hossein Daryabari**, I enjoyed being group members with you. To my two amazing MSc students: **Ronja Hulst** and **Roy Noordhuis**, thank you for your help in collecting data for my study and also for giving me the chance to learn how to instruct younger students.

To my Ph.D. coordinator **Corine Eising** and her assistant **Tineke de Boer**, you offered me great support mentally and helped me with several administrative things that made my life as a Ph.D. student in the Netherlands much easier and enjoyable. I am very grateful for your concern and help.

To my colleagues on Linnaeusborg 1st floor: **Tiphaine Bailey**, **Xiaocui Wang**, **Aude Giraud**, **Gerrit Potkamp**, **Elodie Wilwert**, **Pinar Kohlmeier**, **Philip Kohlmeier**, **Mario Mira**, **Joanna Sabino Pinto**, **Sanne Lamers**, **Nicolas Doubovetzky** and **Adithya Sarma**. Although you people belong to fish/frog/fly groups, I still really enjoyed having lunch breaks with you and I appreciate all the small help you have offered to me. A special thanks **Elodie Wilwert** and **Koen Freerks**, for being my paranymphs at my promotion ceremony.

Also, to **prof. Zhengwang Zhang** (张正旺教授) from Beijing Normal University and **prof. Tamas Szekely** from the University of Bath, thank you for giving me the chance and leading me to the new world of bird research. It was a life-changing decision for me to switch from being a medical student to doing biological research, and you welcomed me and opened that important door for me.

To my Ph.D. dancing group friends, **Shaomin Hou** (侯少敏), **Qinqin Cai** (蔡青青), **Xiaoyan Long** (龙晓燕), and **Xuelai Wang** (王雪莱), I really enjoyed dancing together with you and making Chinese food together with you. The mental support I got from your guys is beyond words.

To my friend **Ziyan Tang** (汤梓艳), your sunshine-like smile, constant supportive words via

message, and enthusiasm for life always be a great support to me.

To my former group supervisor **prof. Congying Wu** (吴聪颖教授), and **members: Jian Gao** (高健), **Yingyue Rong** (容颖雪), **Peng Shi** (石鹏), **Yuxing Huang** (黄宇星), and **Yuan Wang** (王源), in Peking University, you are the first group of people who give me the idea of doing research, we had a wonderful time hanging out as well and you gave me great support when I first started my Ph.D. journey. Thank you for all these.

A special thanks to my cat **Majiang** (麻酱), who is now purring on my lap and kneading on my belly. She has been my fluffy company shortly after I started my Ph.D. journey and had become a star in front of the camera since the “covid-online-meeting” era started. She does not talk much but had shared both my tears and happiness.

I want to say thank you to **Maarten Reitsema**. You only showed up in the last year of my Ph.D. life and in the 26th year of my life which seems a bit too late yet also too perfect. As a product designer, you designed the explanatory schemes in the introduction chapter and the layout of this thesis. As a native Dutch speaker, you translated for the Dutch summary of this thesis. I very much appreciate all your contributions to complete this thesis. Yet as a man that I love, you complete me.

Thanks to **Maarten**, I now also have a Dutch family. **Jeannet** and **Johan Reitsema**, thank you for welcoming me into your family. You always care for my likes and dislikes such as you swapped the raisin with crane berries in the apple tart for me and skip the gourmet at Sinterklaas for me. You are almost spoiling me as if I am your own daughter and I appreciate that. Also, thank you **Nienke**, **Alex**, **Eline**, and **Christian**, I really enjoyed all the dinners and vacations we had together. You brought laughers to my life and gave me that family feeling that I definitely miss.

Finishing a Ph.D. is challenging and mentally stressful which made me sometimes just want to run into my mom’s arms and cry, yet she is physically on the other side of the earth. Still, I want to say thank you to my beloved mother in Chinese. 我爱你妈妈，谢谢你把我培养成为你的骄傲，谢谢你对我的爱与支持！ To my grandma who was a prestigious scientist herself: 感谢您对我从小的教诲，您的一言一行让我受益终身！ And also to my dad who unfortunately passed away too early to see his daughter become a doctor, I assume you would be smiling and be proud of me.
