Take-down policy

If you believe that this document breaches copyright please contact us providing details, and we will remove access to the work immediately and investigate your claim.

Downloaded from the University of Groningen/UMCG research database (Pure): <http://www.rug.nl/research/portal>. For technical reasons the number of authors shown on this cover page is limited to 10 maximum.

Propositions

1. Tourette's Disorder is complex – both in aetiology and presentation (James Leckman & this thesis)
2. There are no large scale structural neural correlates of Tourette's Disorder or ADHD within the CSTS network identifiable in children (this thesis)
3. Future Tourette's Disorder neuroimaging research will benefit from advancements in imaging techniques and the application of multi-modal and data driven methods of larger datasets (this thesis)
4. The most likely conclusion to scientific research is that further research is required (this thesis & the scientific literature)
5. If liberty means anything at all it means the right to tell people what they don't want to hear (George Orwell)
6. The less there is to justify a traditional custom, the harder it is to get rid of it (Mark Twain)
7. Answers do not matter so much as questions, said the Good Fairy. A good question is very hard to answer. The better the question the harder the answer. There is no answer at all to a very good question. (Myles na gCopaleen)
