Personalized treatment with psychiatric drugs through Pharmacogenetics and Therapeutic Drug Monitoring

Optimizing individual treatment using therapeutic drug
monitoring of clozapine and pharmacogenetics.

Lisanne Marieke Geers

COLOPHON

Financial support for the printing of this thesis was kindly provided by UMCG Graduate School of Medical Sciences.

CONTENTS

Chapter 1	General Introduction and outline of this thesis	7
Part 1	TDM	
Chapter 2	Microsampling techniques for Antipsychotics; Current developments and future directions	25
Chapter 3	Dried Blood Spot Analysis for Therapeutic Drug Monitoring of Clozapine	53
Chapter 4	Population pharmacokinetic model and limited sampling strategy for clozapine using plasma and Dried Blood spot samples	75
Part 2A	Genomics: Transporter genetics; P-glycoprotein	
Chapter 5	Influence of eight ABCB1 polymorphisms on antidepressant response in a prospective cohort of treatment-free Russian patients with moderate or severe depression: an explorative psychopharmacological study with naturalistic design	99
Chapter 6	Association between eight P-glycoprotein (MDR1/ABCB1) gene polymorphisms and antipsychotic drug-induced hyperprolactinemia	123
Part 2B	Genomics: Pharmacogenetics; CYP enzymes	
Chapter 7	Dehydroepiandrosterone sulphate as a putative protective factor against tardive dyskinesia	143
Chapter 8	Personalized medicine in psychiatry: discussion and future perspectives	161
Chapter 9	Summary	177
Chapter 10	Nederlandse samenvatting	187
Appendices	Dankwoord (Acknowledgments)	196
	About the author	200
	List of publications	201
