ECS Toyota Young Investigator Fellowship

For young professionals and scholars pursuing research in batteries, fuel cells and hydrogen, and future sustainable technologies.

At least one \$50,000 fellowship is available annually.
More than \$1.4 million awarded since 2015!

Application deadline: January 31, 2023

Upon further analysis of the data, we find that the field dependence of the B-component in figure 2(b) is more likely caused by a significant unidirectional magnetoresistance (UMR), hindering the accurate determination of a damping-like torque for our devices. We would like to stress that all the main conclusions of our work remain the same.
