TABLE OF CONTENTS

Chapter 1	General introduction	7
Part 1: Identifying limited recovery		19
Chapter 2	Patient-reported physical functioning is limited in almost half of critical illness survivors 1-year after ICU-admission: a retrospective single-centre study	21
Chapter 3	The prevalence of mental frailty in ICU-survivors and informal caregiver strain: a 1-year retrospective study of the Frisian aftercare cohort	39
Chapter 4	Long-term health-related quality of life, healthcare utilisation and back-to-work activities in intensive care unit-survivors: prospective confirmatory study from the Frisian aftercare cohort	57
Part 2: Malnutrition and frailty in ICU-patients		77
Chapter 5	The predictive value of phase angle on long-term outcome after ICU-admission	79
Chapter 6	Inadequate protein and energy intake in intensive care unit survivors during the first year of recovery: the Frisian Aftercare cohort study	91
Part 3: Improving recovery after critical illness		109
Chapter 7	The effect of protein provision and exercise therapy on patient-reported and clinical outcomes in ICU-survivors: a systematic review	111
Chapter 8	The feasibility of Virtual Reality therapy for upper extremities mobilisation during and after ICU-admission	175
Chapter 9	Discussion and future perspectives	193
Chapter 10	Nederlandse Samenvatting	207
Chapter 11	Appendices	217
