Acknowledgements

It takes a village to raise a child and an entire faculty to raise a PhD student. I'm very grateful to all who have helped me over the last few years and to NWO for providing the funding. Here, I finally get to say a few words of gratitude.

The first person to thank is my main supervisor for the past seven years, Dr. Blake. Graeme, thank you for guiding me through my PhD and the scientific process step by step while being so kind, understanding and patient along the way. You always found time for me when I dropped by your office unannounced and were always able to point me in the right direction. I always found our scientific discussions very stimulating, and it was great to notice that they became more in-depth as time went on. I also really admire your approach to science. Your focus on scientific integrity, research quality and reproducibility sets a great example for everyone. Since my start in the group as a Bachelor student, you gave me a lot of freedom in my research. I am very happy you trusted me in this process, and I value how independent it made me as a researcher. I am very proud of the work we have done together and hope we can continue working together in some capacity in the future.

Secondly, I want to thank my first promotor and second supervisor, Prof. Dr. Noheda. Beatriz, although our research together was limited to a short project on quartz thin films, I highly enjoyed the project and especially your enthusiasm during meetings. It was very contagious and worked as a great motivator for me. Thank you for always providing very sharp and useful feedback during group meetings and in practice sessions for conference talks. Furthermore, I really appreciate all the discussions we had later on about scientific careers, and I am grateful for all your advice.

A big reason I and many others have any data to present at all is due to our technical wizard, Jacob Baas. I have thoroughly enjoyed all our adventures of fixing equipment big and small, easy and exceedingly difficult. You were key in the process of figuring out the best synthesis routes and for being able to measure all kinds of properties. Your broad knowledge keeps a lot of things afloat in the basement of building 18 and keeps discussions flowing during lunch and coffee breaks. I am sure we will keep in touch in the future. Henk Bonder, thank you for helping with rethreading my aluminum neutron sample holders. It was instrumental to being able to perform the measurement successfully. I will also miss your delicious apple pies and tarte tatins. Dr. Vasek Ocelik, thank you

for your training course on the SEM/EDS and for sharing your crystallographic knowledge during the group meetings. Henriët, thank you so much for your kindness and helping me navigate the inner workings of the university and for always helping me with my travels.

Instrumental to the majority of work presented in this thesis (Chapter 3 and 4) were the researchers from the Neutron & Positron Methods for Materials group at TU Delft. Prof. Dr. Pappas, Katia, thank you for being a major collaborator in the skyrmion project. Your input on the interpretation of the complex magnetic behavior of intercalated FeCl_3 was invaluable for the construction of the magnetic phase diagram. I have also learned tons from our intensive beamtime together at the ISIS neutron and muon source and the HZB. Thank you, Ankit, for the initial analysis of the SANS data and for the enjoyable beamtime together. I will never forget our adventure at Birmingham airport where security nearly opened our tightly sealed air-sensitive samples which took me nearly a year to grow. Good times. Dr. Lambert van Eijck, thank you for helping with the PND measurements on the PEARL instrument at TU Delft. I wish to thank our collaborators of the Theory of Condensed Matter group at the RUG for their part in the skyrmion project. I am grateful to Prof. Dr. Maxim Mostovoy, Arunesh, Evgenii, Maria and Josse for our detailed discussions. A big thank you to Dr. Majid Ahmadi from the Nanostructured Materials and Interfaces group for managing the difficult task of producing STEM images of the cobalt-based coordination polymer. It was great to see how you kept striving for better quality images and I was honored that my crystals could be used as a guinea pig for the new sample holder. Thank you, Heng, from the Nanostructured Materials and Interfaces group, for our fruitful collaboration on the thermoelectric properties of thin films of Bi_2Te_3 . Dr. Robert Dalglish, from ISIS neutron and muon source, and Dr. Uwe Keiderling, from Helmholtz-Zentrum Berlin, thank you for helping with the small angle neutron scattering experiments on FeCl_3 . Dr. Vladimir Pomjakushin from the Paul Scherrer Institute, thank you for your help with the PND experiments on FeCl_3 . Thanks to David Koch and Prof. Dr. Wolfgang Donner from the Strukturforschung group at TU Darmstadt for performing the PXRD measurements under applied magnetic fields of the cobalt-based coordination polymers.

I had a great time providing the tutorials for the PPM II course under the guidance of Prof. Dr. Even. Julia, your enthusiasm and sense of humor made for a great collaboration, and I always enjoyed the process of grading exams while enjoying a curated cup of coffee and some chocolate.

I have been part of the Nanostructures of Functional Oxides group for quite some time and therefore I have seen a lot of people come and go. Here comes an exhaustive list of people I would like to thank for making life in the NFO group very enjoyable.

I am very happy to have been the daily supervisor of some bright students: Tobias, Dagmar and Minze. Thank you for the enthusiasm you brought to the projects. You three never let the frustrations of doing exploratory and fundamental lab-work get to you and only got more curious as time went on. That was great to see and makes me confident you will all succeed in whatever you aspire to do after your studies.

Sanne, we have been classmates and groupmates for the past 10 years. I am very glad that we got to know each other better and became friends along the way. You are a very warm and caring person and I always felt very safe talking and complaining to you about all aspects of life. I will also absolutely miss talking to you about our shared love for shoes and food! You are always welcome at my dinner table for a slice of haggis. I am also very happy you agreed to be my paranymp. Siebe, although you joined the group towards the end of my PhD project, I am glad we got to know each other a bit. I admire your curiosity which always leads to interesting questions and discussions. We had fun discussions on music as well, and I am grateful you introduced me to a fantastic Paul Simon album. Thank you for agreeing to be my paranymp during my defense. Silvia, since our Master's project we have been office mates and we became friends during this time. I have always looked up to your skills as a researcher and I was proud to be by your side as your paranymp. I wish you all the best in the future, just don't forget to take a break every now and then. Hong, I was honored to be your paranymp and had so much fun discussing all kinds of things with you after work. Thank you for always allowing me to tease you and for teasing me back. Ewout, your calm nature and intelligence make you an excellent researcher (which was already clear when you started as a Master student) and a reliable climbing partner. Thank you for all the good times. Ruben, you have an incredibly welcoming personality and are also a very driven and critical researcher. Thank you for all the discussions on American politics, music and for being a great climbing partner/teacher. I would like to thank the old group members, Arash, Machteld, Yingfen, Silang, Jordi, Mart, Arnoud, Anil, Liany, Laaya, Pavan, Vidushi, Jin, Miguel, Cynthia, Qikai, Jolle, Rick, Eric, Winfried, Mike, Michael, Tamara, Edwin, Evgenios, Lilia and current group members, Foelke, Johanna, Arjun, Jan, Marcel, Olga, Yulei, Sepide, Richa and Pim, for all

their help and for making my time in the group so fun. I hope we all stay in touch.

I want to thank my old pals from my Bachelor's degree: Albert, Jelte, Sven, Folkert and George.

A very big thank you for all my close friends outside of academia: Jasper, Robbert-Jan, Niek, Casper, Robin, Jorrit, Aron, Jesse, Gijs and Reinier. Thank you for playing games, making tons of music and hanging out with me. Y'all are beautiful.

Last but not least wil ik mijn lieve familie bedanken. Daniel, David en Johanne, dank jullie voor het supporten van jullie kleine broertje. Ik voel mij altijd erg gesteund door jullie. Mam, dank voor het altijd aanhoren van mijn avonturen. Wanneer ik ten einde raad ben weet ik dat ik altijd bij jou terecht kan. Ik ben erg dankbaar voor jouw aanmoedigingen en oneindige steun. Pap, ik heb altijd fijn gevonden dat ik mijn frustraties en ervaringen kon delen met iemand die dezelfde taal spreekt. Dat soort begrip is zeldzaam voor PhD studenten. Dank voor alle inhoudelijke en niet-inhoudelijke discussies, jouw kritische houding en al het advies. Yvette, jij bent een onuitputtelijke bron van steun en liefde voor mij. Dank voor het altijd bereid zijn om een tripje naar de faculteit te maken zodat ik veilig een meting aan kon zetten in het weekend. Je bent een uitstekende labassistente.
