**Causes and consequences of
glucocorticoid variation
in zebra finches**

This research was carried out at the Groningen Institute for Evolutionary Life Sciences (GELIFES), University of Groningen, and in collaboration with the Max Planck Institute for Ornithology (Seewiesen, Germany). All studies were approved by the animal welfare committee of the University of Groningen.

Cover: Design by Blanca Jimeno based on the original painting by Isabel Ruiz Perdiguero

Lay-out: Blanca Jimeno

Drawings: Lorenzo Pérez-Rodríguez, Raquel Jimeno, Juan G. Rubalcaba, Giel Maan & Eva Ocón

university of
 groningen

Causes and consequences of glucocorticoid variation in zebra finches

PhD Thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. E. Sterken
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on

Friday 13 July 2018 at 12.45 hours

by

Blanca Jimeno Revilla

born on 1 August 1988
 in Soria, Spanje

Supervisors

Prof. S. Verhulst

Prof. M. Hau

Assessment Committee

Prof. C. Breuner

Prof. N. A.J.W. Scheurink

Prof. N. Sachser

Table of contents

Chapter 1: Introduction and synthesis	9
Box A: <i>Glucocorticoids and the concept of “stress” throughout time</i>	31
PART I: Glucocorticoids, environmental effects and survival	37
Chapter 2: <i>Effects of developmental conditions on glucocorticoid concentrations in adulthood depend on sex and foraging conditions</i>	39
Box B: <i>Effects of environmental and intrinsic factors on HPA axis regulation: negative feedback and ACTH response</i>	75
Box C: <i>Environmental effects on feather corticosterone and feather growth</i>	79
Chapter 3: <i>Male but not female zebra finches with high plasma corticosterone have lower survival</i>	85
Chapter 4: <i>DNA methylation and expression levels in the glucocorticoid receptor gene are affected by developmental conditions and predict corticosterone responses in zebra finches</i>	107
PART II: Glucocorticoids and metabolic rate	129
Chapter 5: <i>Strong association between corticosterone levels and temperature-dependent metabolic rate in individual zebra finches</i>	131
Chapter 6: <i>Corticosterone levels reflect variation in metabolic rate, independent of ‘stress’</i>	149
Chapter 7: <i>Glucocorticoid-temperature association is shaped by foraging costs in individual zebra finches</i>	167
Box D: <i>Effects of developmental and adult environments on metabolism. Daily energy expenditure</i>	175
