Acknowledgements

Prof. dr Marina de Koning-Tijssen, I want to thank Marina for taking my call in 2017, when I enthusiastically asked if I could do a PhD on this subject, having very little knowledge of the journey that awaited me. Her openness and generosity is the reason this project happened. Her wisdom and guidance is the reason it succeeded. Prophetically, in our first meeting she emphasized the one truth that would decide whether my ambitious plans would succeed or fail when she said, “Beorn, it will be 1% inspiration and 99% perspiration.” She was right about this, and many other things.

Prof. Andrej Zwitter, Thanks to Andrej, the culture of a new educational institution, Campus Friesland, was married to the ancient culture of speed skating in Friesland. Seeing the value of this partnership, and providing the support to make it a reality, was crucial.

Dr. Tim van Zutphen, I don’t think there was a single moment in the five year push to complete this PhD that Tim was not pushing right beside me. Whatever my difficulty, whatever my concern, Tim was there. I can’t begin to describe the importance of this support for me, except to say that I feel incredibly fortunate and grateful for it. Tim has been my ally in good times, and in bad, and I count him a friend.

Dr. Jan Willem Elting, Jan Willem combines an incredible generosity of spirit and willingness to offer his time and expertise, with being one of the most knowledgeable and intelligent researchers I’ve ever had the privilege of working with. Frankly, it is still a mystery to me how he has enough time to help so many and know so much. Regardless, I’m very thankful I have gotten the chance to work and publish with him.

Dr. Jeroen van der Eb, Jeroen is an adventurer, whether he is mountaineering, programming, or pursuing science. His input and help has been pivotal to the success of my PhD, and following along with his fascinating journey combining science and performance in top sports has been an adventure all its own. For his essential help, I am very thankful.

Prof. Bert Otten, I want to thank Bert for being both a vastly experienced and helpful supporter of my project, while also tempering my beliefs with a different perspective: a hugely enriching combination.

Prof. B. van de Warrenburg, Prof. C.J.C. Lamoth, and Prof. A. Lee, Thank you very much for taking the time reading and assessing my thesis.

Nynke Siderius and Remco van der Zwaan, I want to thank both of Nynke and Remco for the generous help and input in collecting data. Your input, knowhow and companionship made a challenging and complex experience more rewarding, and often a joy.

The participants: To a person, every participant who volunteered their time to help make my studies a reality were polite, patient, enthusiastic and helpful in spite of a difficult and time consuming protocol for data collection - for that I can't be more thankful.

Thialf Lab, I want to thank Thialf Lab, and Inge Stoter for facilitating a setting for me to do this research in one of the nicest ice-skating rinks in the world.

Tina Nijenhuis, Thank you for being an unwavering and permanent source of love and concern. It is the greatest gift a person can give, and you have given it to your children always.

The late Gerrit Nijenhuis, Thank you for sharing with me the love of the difficult journey, even when the skies were getting dark and the road was getting hard, we knew it was always worth it.

Lisandra Novo, Thank you for changing my life in immeasurably positive ways.
