Galectins, (re)myelination and multiple sclerosis pathology

van Mirjana Stancic (2012)

- 1. Creation of a super influenza virus out of scientific curiosity may turn out to be another proof that the road to hell is paved with good intentions (Nature 2011, 480: 421-422).*
- 2. The decreased prevalence of infectious diseases and increased frequency of autoimmune disorders over the last decades makes one wonder whether the high level of sanitation is always a good thing (N Engl J Med 2002; 347:911-920).*
- 3. Only when regenerative medicine-that helps organism to repair the damage- will act together with conventional medicine-that treats the cause of the disease- one might expect to cure diseases such as multiple sclerosis (Brain 2011; 134:1882-900).*
- 4. Recent advances in the field of synthetic physiology hold a promise for diabetes patients, implying that one day they might be cured with a beam of light (coming from an iPhone) (Science 2012; 332: 1565-1568).*
- 5. Progress in science very much depends on financial investments. In times of economical crisis, more on perseverance.*
- 6. In natural sciences it is more difficult to come up with a simple explanation than a complicated one.*
- 7. Obesity is a price modern society pays for technological advancement.*
- 8. It is frustrating that the period of carrying out a PhD research project is often not recognized by employers as work experience.*
- 9. It is better to be rejected on the basis of original work than being accepted on the basis of reproduced work.*
- 10. Nowadays one of the measures of success is how well one can keep up with the pace of moving from one deadline to another.*
