TABLE OF CONTENTS

1	General introduction and aims	8
----------	-------------------------------	---

PART I

Early diagnosis of Hirschsprung's disease

2	Infant's age influences the accuracy of rectal suction biopsies for diagnosing of Hirschsprung's disease	32
3	Anorectal manometry may reduce the number of rectal suction biopsy procedures needed to diagnose Hirschsprung's disease	50
4	Immaturity of the rectoanal inhibitory reflex as a cause of severe constipation in newborns	68
5	Solitary rectal ulcer syndrome as a sign of unrecognized Hirschsprung's disease	82

PART II

Defecation disorders in the general population

6	Reproducibility, feasibility, and validity of the Groningen Defecation and Fecal Continence questionnaires	92
7	On the prevalence of constipation and fecal incontinence, and their co-occurrence, in the Netherlands	108

PART III

Long-term outcomes of Hirschsprung's disease

8	Long-term functional outcomes and quality of life in patients with Hirschsprung's disease	128
9	Matched comparison of outcomes following Duhamel and transanal endorectal pull-through procedures in patients with Hirschsprung's disease	146
10	Dyssynergic defecation may play an important role in postoperative Hirschsprung's disease patients with severe persistent constipation	164
11	General discussion and future perspectives	180
12	Summary	194
13	Samenvatting (Dutch summary)	202

APPENDICES

The Groningen DeFeC questionnaire	212
