TABLE OF CONTENT

CHAPTER 1	Introduction and aims of the thesis	1
<hr/>		
PART I: PREDICTING OUTCOMES OF PATIENTS WITH INFECTION OR SEPSIS IN THE EMERGENCY DEPARTMENT		10
CHAPTER 2	Sepsis patients in the emergency department: stratification using the Clinical Impression Score, Predisposition, Infection, Response and Organ dysfunction score or quick Sequential Organ Failure Assessment score?	11
CHAPTER 3	Biomarkers or clinical observations to identify (outcome of) emergency department patients with infection?	25
<hr/>		
PART II: TRENDS AND VARIABILITY IN VITAL SIGNS AS PREDICTORS OF PATIENT DETERIORATION		30
CHAPTER 4	Sepsis: beyond mortality.	31
CHAPTER 5	Trends in vital signs and routine biomarkers in patients with sepsis during resuscitation in the emergency department: a prospective observational pilot study.	35
CHAPTER 6	Repeated vital sign measurements in the emergency department predict patient deterioration within 72 hours: a prospective observational study.	49
CHAPTER 7	Heart rate variability as early warning for patient deterioration in emergency department patients with sepsis: the study protocol of the SepsiVar study.	67
CHAPTER 8	48-hour continuous heart rate variability as early warning for patient deterioration in emergency department patients with sepsis: preliminary results of the SepsiVar study.	79
CHAPTER 9	Summary and future perspectives	101
CHAPTER 10	Summary in Dutch	119
<hr/>
