Acknowledgments

It was not an easy journey for me to finish my PhD research in a city more than 10000 km away from my family, especially since it was impossible for me to be back home for two years due to the COVID-19 pandemic. I'm lucky to meet so many nice and talented people as my supervisors, colleagues, classmates, flatmates, office mates, tutors, peer mentors, or friends here, and many of you play multiple roles during my six-year stay in Groningen. Without your support, I could not finish my PhD study.

First, I would like to acknowledge my supervisors. **Bart**, thank you for offering me a PhD position in FND. You are a successful scientist with an outstanding taste for research problems, and I benefitted a lot from our discussion. I appreciate your critical view, and you can always find the missing links in my deductions. The happiest moment during my PhD is when you told me "It's definitely a PRL-level result" after discussing our results on ultrathin YIG films. As a group leader, your generous financial support to our training and research enables us to explore those interesting topics freely. Sometimes you called me Xianyang in emails, and it happens to be the name of a city close to my hometown. I hope one day I can invite you to visit that city when you are available. **Maxim**, thank you for being my second supervisor. You explained to us how the magnons interact with the skyrmions in theory step by step in your office when I started my PhD. Although we didn't achieve this in experiments in the end, the beauty of the theory you showed always encourages me to explore the physics behind the daily experiments. **Gerrit**, I hope you don't mind I regard you as my "unofficial" supervisor of my PhD research. Thank you for your thorough and patient feedback on our papers. I appreciate your critical comments and valuable theory support, and I enjoy those chats with you about skiing, traveling, and other sports. "The competition is not sleeping", I will always keep your words in mind.

I would like to thank my collaborators at FND during my PhD research. **Jamal**, thank you for your effort to grow ultrathin YIG films with good quality. **Stephan**, thank you for your effort to grow the record-thin YIG films at the unit-cell level, and

thank you for your thorough feedback on our paper.

I would like to thank my assessment committee. **George**, you evaluated both my master's presentation and my PhD thesis, thank you for your time and input. **Rembert** and **Fèlix**, thank you for assessing my thesis and traveling to Groningen for my defense. I also would like to thank other members of my defense committee. In particular **Matthias**, thank you for traveling to Groningen to join my defense.

I would like to express my gratitude to other PIs in the FND group. **Tamalika**, you are always considerate and supportive. I still remember that you said "We are all here for you" when you knew my parents could not be there for my master's graduation. **Caspar**, thank you for supervising my master thesis, you were always saying something nice about my work when we had weekly meetings, even though sometimes I only showed some basic coding. **Marcos**, thank you for providing a recommendation letter for my Postdoc application. I also benefitted from our discussion about spin-orbit torques and your tutorial about electrical measurements for FND.

I would like to acknowledge the technical and administrative support. **Johan Holstein**, thank you for taking in charge of the nanolabs. You spent a lot of time keeping the lab running in order. **Hans**, thank you for your patient, generous, and supportive help with the equipment training and maintenance. It is my honor and pleasure to work with you. I enjoy those small chats with you in the corridor. Your sharing about your family camping experiences also motivates me to plan similar activities with my family. **Jacob**, thank you for the MPMS training and for helping us maintain the PPMS. No matter how strange problems we met, you can always come up with nice solutions for us. **Tom**, thank you for helping me with my office computer and those delicious vegetables that you shared with us. **Arjun**, thank you for maintaining the EBL machine. Your two offices in FND and NFO may have the longest distance in Zernike. **Herman**, thank you for those electrical tools you designed. **Frits**, thank you for solving technic problems. **Johan Kuiper**, thank you for your help on the helium supply. Sometimes even if it was the weekend, you were still willing to come to help me get the helium vessel. I also want to thank Andre, Gordon, and Ricardo for your help when Johan was on holiday. And **Marleen**, thank you for your secretary work in FND. You are always there to help us deal with those administrative issues.

I would like to thank my mentor in my topmaster study. **Thomas**, thank you for your kind suggestions during my master's study.

Special thanks to **Xuanbo Feng**, **Tian Liu**, **Si Chen**, **Yingfen Wei**, and **Ping Zhang**. You are more than friends, colleagues, classmates, or flatmates, and you are like brothers and sisters to me. **Xuanbo Feng**, you said to me one day after our class, "Some smart people will realize that they can get more pleasure by earning money than by studying physics when the moment comes." After four-year research in

physics, you choose to work in a quant fund. It's a pity that I cannot be on-site for your defense as your paranymp, but I'm lucky that I still can have you as my paranymp. Although you moved to Amsterdam after your master, we still traveled, discussed, and had dinner together during our PhD. Thank you for your help when I was trapped in the airport due to COVID-19. I wish you and **Yue** all the best in Europe. **Tian Liu**, thank you for your generous and detailed support and help for the last six years. We shared our views on physics, stocks, history, and many other topics. You and **Dong** are always willing to host us in your place. I wish you all the best with your career at Infineon. **Si Chen**, thank you for your listening and help. As the host in Switzerland said, you are a wonderful person. You are always willing to help everyone, and you are always caring about everyone. I wish you all the best in the Netherlands. **Yingfen Wei**, thank you for your recipe for Dongporou and that nice food. Your optimism also encourages me. You always work hard and set a good example for me. I will you all the best in Fudan University. **Ping Zhang**, it is already difficult enough for me to finish my PhD, but you not only finished a PhD but also gave birth to **Zhilan** in the last few years! It was always a recharging time for me to visit you and **Si's** office. I will you, **Gang**, and **Zhilan** happiness in China.

I would like to thank my colleagues in FND. **Jing Liu**, thank you for your help on the magnon research. Even though you were busy with your graduation, you still gave me help as much as you can. **Lei Liang**, thank you for your training and sharing about scientific research and electrical measurements from the beginning as a peer mentor. **Juan Shan**, thank you for your sharing and suggestions about the COMSOL simulations. **Obed**, thank you for those productive discussions we have, it's my pleasure to work with you. I hope you all the best in Cambridge. **Alexey**, thank you for your patient help and kind suggestions. I hope you and your wife enjoy life in Japan. **Sytze**, thank you for helping me check my Dutch summary. **Xu, Frank, Geert**, and **Jan**, thank you for your organizing those wonderful group outings. **Anouk, Carmem, Tom, Job, Arijit, Talieh, Dennis, Cédric, Aaron, Anna, Tamás, Joop, Rafael, Pep, Ludo, Weijia, Kumar, Boxuan, Cristhian, Julian, Christian, Mallik, Madhu, Maxen, Jorge, Siddhartha, Freddie, Arjan, Azminul**, and **Feitze**, thank you for your support when I met problems and making FND a big family for me.

I also would like to thank my other paranymp, **Puhua Wan**. Thank you for being my paranymp. I missed those days we teamed up for mobile games in Honglou. You are not only one of the most hardworking researchers but also one of the best cooks I knew in Zernike.

I also would like to acknowledge other friends I met in the Netherlands. My social battery is quite low, but I'm lucky to have you all for sharing, playing, cooking, and traveling. **Chen Yao**, thank you for showing me around Shanghai. You are good at cooking and you can always find the best restaurants. I appreciate your passion

for science education, and I will you all the best in your study in Manchester. **Tao Yu**, thank you for those inspiring discussions and your recommendation letter for my Postdoc application, you are definitely a rising star in academia. **Fangfang Guo**, thank you for your recipe for Meicaikourou and those nice dinners, I wish you enjoy your life in London. **Jing Xu**, thank you for those nice parties you organized, I wish you success in ASML. **Yanxi Zhang**, you are always nice to share your experience. I wish you all the best in Xiamen University. **Xiaoli Peng**, we start our PhD research at the same time, and we both survived. I wish you all the best in your future career. **Sanne, Qikai Guo, Jing Chen, Cheng Sun, Yun Si, Ying Wang, Qi Chen, Xiaoyao Zhang, Suqing Wu, Xin Jiang, Miao Yu, Mingpeng, Qihong Chen, Xiaoyan Dai, Jingjin Dong, Guangyue Zu, Tenzin, Jane, Yichen Liu, Chenming Peng, Xiang Tang, Xin Wang, Bingqian Yan, Le Zhang, Kai Zhong, Silang Zhou, Xiaodong Feng, Xiaoming Miao, Bin Liu, Xiaotian, and Ningzhi Liu**, thank you for your company in the Netherlands.

I would like to thank my girlfriend, Jiefei. We met last Spring in the Netherlands, which is the best season in the Netherlands, full of flowers. From the Netherlands to China, we have shared a lot of joyful moments during our traveling. Thank you for your support during those anxious, stressful, and sometimes depressing times.

In the end, I would like to express my gratitude to my parents. 亲爱的爸爸妈妈，感谢你们一直以来的支持，鼓励和包容。你们是我为人处事上永远的榜样。尽管从高中起我就独自在外求学，但你们的爱一直陪伴着我。

I'm not good at expressing my feelings, but I wish you all health, happiness, and success in life. I would like to finish my acknowledgments with a Chinese poem.

海内存知己，天涯若比邻。

(A bond of friendship cannot be broken apart by distance.)
