Acknowledgments

I extend my deepest gratitude to Maxim Mostovoy, my PhD supervisor. I owe a tremendous amount to him. It is not easy to put into words how much I have learned from our countless blackboard conversations and his insightful written remarks. He was the ideal mentor, resonating with my current life view.

I also thank Professors Jeroen van den Brink, Rembert A. Duine and Bart J. van Wees for actively participating in my PhD assessment committee.

Tamalika Banerjee, my second supervisor, deserves special recognition for her unwavering support. Our discussions during our collaboration together with Ping and Maria were moments I greatly enjoyed. I must also extend my gratitude to Maria for her invaluable friendship and the wealth of knowledge I gained from you, both scientifically and personally.

To Somnath, Kirill, Joachim Deisenhofer, and Istvan Kézsmárki, whose warm hospitality in Augsburg and collaborative efforts made for a fruitful and enjoyable experience while working together, I offer my sincere thanks.

I thank Francesco for the engaging discussions on CrI₃, and Paolo Barone for our productive collaboration on the same topic.

Jagoda Sławińska's offer of a postdoc position and her understanding during challenging times prior to the completion of my PhD, were invaluable. I also thank my new group members - Homayoun, Karma, Chen and Przemysław - for the engaging discussions on new topics.

The work presented in this thesis was conducted within the research group "Theory of Condensed Matter" at the Zernike Institute for Advanced Materials, University of Groningen, the Netherlands. My thanks go out to all the members of the group. Additionally, I am immensely grateful to NWO and, specifically, the Vrije FOM-programma 'Skymionics' for their support of this work.

I must also acknowledge my paranymphs, Vesna and Ceyda, who always brighten my days. The moments we shared went deep down under my skin and made me a better version of myself.

Arunesh, our coffee breaks were scientifically enriching and wonderfully entertaining. My thanks go out to you, my friend.

To Josse, I am grateful for our scientific discussions and beyond. Regrettably, we didn't seize the opportunity to work together.

Alessio, your crash course in numerics was very helpful, and the time we spent together was greatly appreciated.

Jamo, you were not only the best housemate but also came to my aid by translating my summary into Dutch.

Finally, I reserve my deepest thanks to my mom. Without her efforts, there would be no me in every imaginable sense.

By this point, I have found myself incapable of further ranking the significance of each individual. There is something inherently challenging and inhuman about arranging people into a list. The past years of my PhD journey have brought me into contact with many brilliant people who contributed directly or indirectly to this journey. I sincerely hope that each of you understands how deeply I value the moments we shared. Please catch me in a hallway, and I promise we will reminisce about those moments in great detail.
