Acknowledgements

There are many people that I want to thank for the support they have provided me during my PhD, firstly specifically those who gave me training and guidance towards become an independent scientist and those that contributed directly to the work presented in this thesis. It takes a village to raise a PhD, and there are several people who really helped me become the scientist I am today, but I want to start by thanking my supervisor, **Gerard**. You believed in me before I even started the PhD, giving me the time I needed to accept the offer and come to Groningen. This continued throughout my time working with you, and the confidence and freedom you gave me allowed me to mature as a scientist. You always made time for scientific discussions, which often became pretty philosophical. Although you of course wanted me to produce excellent results and insights, you were also supportive during the failures and mistakes that are inevitable in science. You always had an eye on my career and skills, giving me opportunities to supervise students, attend conferences and also to go on exchange to learn from another group. It was great that you also gave me the opportunity to stay on for another year as a postdoctoral researcher in your group. For all of this I am extremely grateful, and I look forward to staying in touch and seeing how your group and its research will grow and develop.

Many other people provided essential advice throughout my PhD, and especially in the early phase I received a lot of help from **Clemens**. You taught me a lot and gave time for my questions. You also had a lot of patience for my wanting skills in scientific writing at the beginning, and together we produced a review article which became part of the introduction to this thesis, and I think it's a piece of writing that we can both be extremely proud of. Your knowledge, passion for science, and pragmatism have inspired my own development. Thank you.

When I came to Groningen I didn't know a lot about molecular biology, and I needed a lot of help. **Hugo, Cate** and **Nikola**, you all taught me many things and always made time for my questions, however trivial they were. Thanks to you three, I learnt to be pragmatic and efficient in the work I did in the molecular biology lab. It's been a privilege to watch GECCO getting off the ground and I have great hopes for its future.

I got the opportunity to spend a few months working applying computational techniques to my research. Thanks **JeanDi** for supporting my in your group, you were a gracious host with a lot of enthusiasm and I really enjoyed my time

working there. All the group members were very kind to me, thank you **Laura** (Martinez), **Lorena**, **Xavi**, **Raul**, **José**, **Agusti**. My thanks goes especially to **Laura** (Tiessler-Sala) - you have been really helpful and a pleasure to work with. Thanks also to the Federation of European Biochemical Societies for financial support that allowed me to make this trip.

Lars, the work we did together makes up the largest and most innovative chapter of this thesis, thanks to the huge dedication that you made to it. You are an exceptional scientist, in your expertise, pragmatism and determination and its impressive to see how you have already mentored many people in the group. I wish you the best for your future, I know you will produce a lot of great science.

Thanks to the whole CIT service-desk that helped with my inadequate computer skills, especially **Bob**, who helped me a lot in using the Peregrine cluster and installed several pieces of software there for me.

I got the opportunity to be the daily supervisor for two master's projects during my time in Groningen. I learnt a lot from working with these two younger researchers. **Ruben** (de Boer), you were extremely dedicated in your work and ultimately produced important results that feature in this thesis and our paper together. I am really happy that you found a good opportunity to do a PhD, and I know you'll have a lot of success with it. **Jordy**, it was a lot of fun to work with you on a challenging project. You brought a good atmosphere to the lab, and made some great progress towards the goals. I wish you the best of luck in your career.

Before I started the PhD journey I had great mentorship during my master's internship at Sasol UK in St. Andrews. I really had a formative experience there that laid a solid foundation to take me into a PhD, and I am grateful to all my colleagues from that time for creating a great environment. Thanks to **Prof. Bob Tooze**, you were extremely helpful and caring, and even spent time to help me prepare for the interview process for the Salter's award and wrote letters of reference for me when I applied for PhD positions. **Dr. Jianke Liu**, thanks for your supervision in the lab and for everything you did to get our research published. **Dr. Paul Webb** thanks for your mentorship and enthusiasm for science. **Dr. Martin Hanton** thanks for all you taught me about how to be practical and pragmatic when working in organometallic chemistry. **Dr. Iaroslav Kosov** thanks for sharing all the fun times and frustrations in the lab with me, and many congratulations on completing your own PhD.

Henriëtte, thanks for your patience with me and the hard work you put in producing crystals which ultimately resulted in 5 (!) structures in this thesis. **Andy**, thanks for solving the structures of those crystals and interesting discussions about the results, which gave great insights for the work presented here.

Zhi, you also showed me the ropes when I started my PhD and taught me some tips and tricks in organocatalysis. Thanks for the help you gave me, and congratulations for starting your own research group. I look forward to seeing what you will do. **Ivana** (Drienovská), you produced the initial results that formed the basis of Chapter 3, and this gave me a rolling start for my PhD. Thanks for being easy to get in touch with whenever I needed to find a glycerol stock or plasmid.

I would also like to use this space to thank the members of the reading committee for their efforts in helping to assess this thesis, thank you **Prof. Donald Hilvert**, **Prof. dr. Marte Walvoort** and **Prof. dr. Gerrit Poelarends**. Thanks as well to my second supervisor **Prof. dr. Wesley Browne**, who also trained me to conduct fluorescence quenching measurements and taught me about the curse that is the inner filter effect.

My research would not have been possible without a lot of help from the fantastic team which care for the analytical facilities of the department, whom I relied on greatly. **Renze**, thanks for all your help and advice with HPLC as well as performing HRMS measurements. **Johan** (Hekelaar), thanks for help with many many LCMS measurements, and endless QTOF errors (which Renze also helped a lot with). Thanks **Franz** for performing trypsin digest experiments and helping me to analyse the results. Thanks **Johan** (Kemink) and **Pieter** for fixing errors I caused in the NMR. Many other technicians also kept the labs running upstairs and downstairs, thanks to **Christiaan**, **Hans**, **John** and **Hugo** (Bakker) for all your work.

Alongside those who directly helped my journey as a scientist so far, many people also contributed to making a really lovely working environment and over the years in Groningen I made some great friends. Hopefully it goes without saying that these groups are not exclusive of one another. To my paranymphs, Friso and Fabrizio, thank you for the hard work you have put in for this role. You have both been great colleagues to have over the years. **Fabrizio**, you always have a good attitude towards your work. You know how to still laugh when a failed experiment gets you down, and that kind of lightness is something we all need. You are a very skilled scientist and

I am already excited to read your thesis. Thanks also to **Gemma** for all the nice times we had together, including la Rochelle and celebrating our birthdays together. **Friso**, your calm approach towards your work and the care you show towards others is really inspiring. You helped me with a lot technical questions throughout my PhD and helped with the translation of the Nederlandse samenvatting, thank you for that. Thanks also for the many times you watered my plants and fed the fish whilst I was on holiday. We also shared several nice dinners and evenings together with **Nina**.

Reinder, your steady and sober attitude towards the PhD was really an inspiration for me to keep a level-head and a constant pace and direction in my own PhD.

Roos, you were an extremely kind and sympathetic colleague, thank you.

Bart, it was great to work with you over the years, to have someone to share frustrations with as well as interesting ideas and discussions about computation. We also celebrated a very nice new year's together. Good luck for the rest of your PhD. **Roxana**, it was great to sit in the hallway with you a take a break to chat, you worked incredibly hard in the lab but always maintained grace and composure.

Andrea, you were a really fun colleague to have and we shared a lot of laughs in the lab, thank you.

Katy, it was really great having you in the group and working with you both times you came to visit, you were a really friendly colleague to have and I we had a lot of interesting discussions. I hope we will meet again.

Lur, it was very nice to work with you at the beginning of my PhD. You took the time to explain many things about computational biochemistry to me, and ultimately inspired me to focus more on this.

Sylvia, thanks for your continued friendship during this time in Groningen, and for the many nice times we spent together.

Claudia, it was great to share a lab with you and I was very happy when you decided to continue in our group for a PhD. Whether it was dancing to some music in the lab, or sharing frustrations over misbehaving chemistry, it was great working with you.

Rudy, our PhDs ran a similar course although you managed to finish a bit

faster than I did, but you were certainly a role model for me. You epitomise professionalism combined with a sense of fun and excitement for science, I wish you all the best for work and life.

Titia, you've been a great lab mate. Your dedication to your PhD is inspiring, not only in your hard work on your own research but also in mentoring students. I know you have a very bright future. I really enjoyed the many dinners together with you and **Margot**, and thanks to both of you for being great neighbours and all your help with the plants and fish.

Linda, it was always nice chatting with you both in and out of the lab, it's truly amazing that you could complete a PhD and become a mother at the same time. Thanks also for making a couple of the mutants in this thesis.

Ale, I always enjoyed chatting with you about work and life, you have a true passion for science and also know how to have a good laugh. Good luck with the completion of your PhD, although you do not need it.

Thanks also to **Ginny**, you gave me a lot of support during these years and believed in me even when I did not believe in myself.

I want to thank all other members of the Roelfes and Mayer groups for everything you did to make a great atmosphere for all of us to work in, for the borrels, the parties, the cakes and everything else. So, thanks to **Ru, Valeria, Yans, Suzanne, Rita, Michela, Mathijs, Daniel, Franco, Tanja, Renger, Leonard, Livia, Eleonora, Marta, Cora, Ruben, Dowine, Annabelle, Braca, Isabella**.

Thanks also to the research groups of **Prof. dr. Marco Fraaije** and **Prof. dr. Dick Janssen** for the sharing of lab space and to the other very friendly people of the biotechnology groups who are not yet mentioned for the nice borrels and parties together: **Alejandro, Saniye, Gwen, Lars, Misun, Max, Nyoman, Yiming, Yapei, Ben, Guang, Jeroen, Qinglong, Simone, Mohammed, Ivana, Andrea, Milos, Kerlen, Laura** (Mascotti), **Elvira, Nikolas**.

Many other people around Nijenborgh 4 also made it a great place to work, so thanks to: **Kayleigh, Jim, Kristin, Saurabh, Jane, Ciaran, Daisy, Esther, Siriphong, Matthijs, Cosimo, Balint**. I cannot emphasise enough what a fantastic place it was to work during my PhD in Groningen because of all the amazing people around. I hope I managed to mention everyone, if I missed you I am truly sorry!

I want to also thank the close friends that I have known for a long time. **George**, you are like a brother to me and I could not be more proud of you, I am so happy that you and **Carina** are starting a family together. **Sam**, you have been there for most of my scientific journey, and you are simply a great friend and a great person.

Finally, I would like to thank the people that are and have been the closest to me in my life. Thanks **Mum** for all the encouragement you gave me in my PhD, and for the pride you showed for me. It really means a lot. Thanks also for all the proofreading you did for me. Thanks **Dad** and **Annee** for always taking the time to hear what I had been researching and showing enthusiasm for my work, and also of course for all your kind words of support. Thanks **Indigo** for being a great sister, and especially for making the artwork for this thesis.

Alex, we've had so many great experiences together in the last year, its been truly remarkable. You gave me a lot of support and cared for me deeply, the memories we have together are already almost uncountable, I cannot thank you enough for that.

Reuben Boddington Leveson-Gower
