Contents

Chapter 1	Rationale, general introduction and thesis outline	9
Chapter 2	Diagnosis, follow-up and treatment of cystic fibrosis-related liver disease	35
Chapter 3	Bile acid homeostasis in gastrointestinal and metabolic complications of cystic fibrosis	55
Chapter 4	Ivacaftor restores FGF19 regulated bile acid homeostasis in cystic fibrosis patients with an S1251N or a G551D gating mutation	81
Chapter 5	Defective FXR-FGF15 signaling and bile acid homeostasis in cystic fibrosis mice can be restored by the laxative polyethylene glycol	105
Chapter 6	Efficient reabsorption of transintestinally excreted cholesterol is a strong determinant for cholesterol disposal in mice	125
Chapter 7	Inhibition of the apical sodium-dependent bile acid transporter (ASBT) mitigates diet-induced hepatic steatosis and increases fecal fat excretion independent of diet composition	153
Chapter 8	Attenuation of the hepatoprotective effects of ileal apical sodium dependent bile acid transporter (ASBT) inhibition in choline-deficient L-amino acid-defined (CDAA) diet-fed mice	183
Chapter 9	General discussion and conclusion	209
Appendices	Abbreviations	231
	Summary	236
	Samenvatting	240
	Acknowledgements	246
	Biography	252
	Biografie	253
	List of publications	255
