When a chapter comes to an end, it is inevitable not looking back. Despite some upside downs and personal challenges, this PhD journey has brought many positive aspects to my life, including everyone that accompanied and supported me during these years. I feel very grateful for encountering such inspiring colleagues and friends along the way and having the unwavering support of my family and friends. You all have been a constant source of motivation without which I would not have made it so far. Hence, this thesis is a collective achievement, and this book does not only belong to me, but also to my supervisors, colleagues, friends, and family.

First of all, I would like to specially thank my supervisor Prof. Dr. Edwin Bremer for bringing me the opportunity to embark in this PhD project. Thank you for all the interesting discussions we had (and have), for always being willing to help no matter how busy you are, for seeing the glass half full when I see it completely empty or for making me think and consider things from different perspectives. I am really grateful for all the opportunities you have given me over these years. You have been an example of hard work and dedication to science, and without you, this work would not have been possible. I wish you personally and professionally all the best.

I would like to also thank Dr. Lars Dähne for giving me the opportunity to join your company and work on the WGM as starting point of my PhD. I remember our discussions, often ending up with papers full of chemistry formulas that I did not always understand, but thanks to which I learned a lot.

I also would like to express my special thanks of gratitude to all the professors and clinicians from the Hematology Department, in particular Prof. Dr. Gerwin Huls and Dr. Tom van Meerten, Prof. Dr. J.J. Schuringa, also Dr. Marco de Bruyn, for the fruitful discussion during seminars/meetings and your always willingness to discuss science.

This PhD journey started in a small start-up company in Berlin. There, I would like to thank all my colleagues at Surflay Nanotec GmbH, for their support and advice in a field that was totally new for me. I learned a lot from you all, and I remember my time in Berlin with a smile. I want to express my special gratitude to Kerstin for the support you provided me at work, but also outside work. Also, thank you Ines, our conversations brightened many of my days.

One year and half later, and in the middle of the COVID pandemic I moved to Groningen. I met most of you wearing masks, and it was funny to discover your faces only several months afterwards. I would like to express my deepest gratitude to all my colleagues at MOL lab, those who were there when I started and those who joined later. I am very grateful for working in a lab where everyone is always willing to help with a smile. I have enjoyed every moment we have spent together, including lab days, Sinterklaas, lab/office talks, party committee’s events, etc. Thanks to all of you, Alan, Vrouyr, Vinicio, Manolis, Lieve, Dominique, Nisha, Nienke, Shanna, Maryam, Jonas, Priscila, Tjerk-Jan, Minh, Janneke, Marieke, Hilde, Maria, Anastasia, Lena, Aysenur, Thomas, Wendy, Sofia, I am glad to have shared some part of this journey with you and I wish you all the best in your PhDs/future. Thanks also to Diego, Isabel, Vincent, Valerie, Ewa, from the very beginning you have been of great support, and I appreciate your always willingness to help with experiments or discuss science. Special thanks to Ewa, for bringing me the opportunity to work in the CD24 project with you thanks to which I have learned a lot. Also thank you to Annet, Marjan, Bart-Jan, Rianne, Robin, Nikita, Glenn, also Mark, for keeping the lab in
order, sharing your expertise, and helping me whenever I needed it. Couldn’t have asked for better colleagues.

I also would like to express my gratitude to all members at Stem Cell Lab (now CTL). Sorry-not sorry for those daily messages asking for healthy donor’s samples. You have been of great support to my research.

Next, I would like to specially thank some people that have become not only colleagues, but also close friends, with many of them also collaborating on several chapters of this thesis.

My dear Harm Jan, “javián” for my grandma, since my first visit to Groningen you have always tried your best to make me feel like home. Definitely, my PhD both in terms of experimental work and personal life would not have been the same without you. You are the “vitamin” person everyone should have around. I enjoy our discussions about random topics, in which of course you always came back with advanced statistics and data. Thanks for showing me I am not that smart, and for saving me more than a couple of times. You know, don’t make Spanish friends, especially because you get addicted to stupid games and end up having lunch at 4 pm. After all, I can say Groningen feels a bit like home because of you. Dear Maca, as we say in Spanish, “todos necesitamos un poco de sur para no perder el norte”. Since (literally) my first day in Groningen you have been a crucial support for me. My friends and family have been yours, and vice versa. Together we have learned to enjoy the grey days of this city, replaced the “tapas” by bitterballen, cycled under the rain, sailed (or tried) through the canals, or travelled around the whole Netherlands and beyond. I could not have imagined a better buddy for this experience. Also at work, thank you for teaching me many techniques, for those coffee breaks or for our morning talks in the culture room.

We can keep playing the lottery every year (you understand me), but I have already won it with the best paranymphs.

Natasha, you were the first person I met, even before starting my PhD. Since then, I can only thank you for our conversations while I was still in Berlin, for hosting me in my first visit to Groningen, for welcoming me later when I moved here, for your support in the lab and of course for your work on the CD24 project. You have been a big support during my whole PhD, and I am really looking forward to visiting you and your lovely family soon. Yuzhu, my phagocytosis teammate and favorite “macrophage”. Your upbeat spirit has been a constant source of inspiration and happiness. I have enjoyed working together and would like to special thank you for your work on several chapters of this thesis. Also, thank you for sharing your beloved Chinese culture or caring about me over these years. We have a lot of joyful memories together, from Boston to Asturias, and I don’t know what the future holds, but you can always count on me. Levi, arriba, abajo, al centro, y ...! I remember our long days in the lab, “fighting” to use the luminometer, discussing about our luminescence experiments or our (PhD) lives in general, but always supporting each other. Your relentless curiosity and unwavering commitment will bring you as far as you want, of that, I am sure. Yusheng, your optimistic spirit has always impressed me. Thank you for you unwavering support, and special thanks for your contribution to chapter 4B of this thesis. Despite the distance I wish you all the best in your life and hope to visit you one day in China. Ghizlane, I am very grateful you have accompanied me during my whole PhD
journey. I will always remember our first days in Berlin, the late evenings at work, our intensive German courses, the moving to Groningen or your defense ceremony. You have made great achievements in these years, and I wish you all the best for the future. Sumalai and Orsi, my sincere gratitude for your support both within and outside work. Thank you for letting me know your lovely families, and I am already looking forward to the next Loempia’s party or Palinka ‘cheers’. Lisa, thanks for your positivity and willingness to help in any situation. I am very happy we can keep working together. Sonya ( & Fede), thank you for your support and friendship since I moved to Groningen and all the great memories we have beyond the lab.

On the other hand, I want to extend my appreciation to every member of the I-DireCT consortium, especially the fellow PhD students, with whom I had the opportunity to engaged in stimulating scientific discussions during our annual meetings. My best wishes to all of them for their future.

Also, to all the students I had the opportunity to work with and that have in one way or another contributed to the chapters presented in this thesis.

Last but not least, outside work, I would like to thank to my friends and family.
Por último, pero no por ello menos importante, quisiera agradecer a mi familia y amigos su apoyo.

Quiero dar las gracias a mis amigos de toda la vida, mis Amantecaos, por vuestro apoyo constante haga lo que haga y esté donde esté. Del mismo modo a mis biotequis, mis ABC, que aun estando cada uno en una parte del mundo nos seguimos apoyando los unos a los otros como si estudiáramos para un examen de Ramón. Gracias a todos por seguir siendo casa, a pesar de los pocos días del año que nos podemos juntar. Siempre en mi equipo, ya lo sabéis.

Gracias también a mis chicas del norte, por ser mi segunda familia durante mi vida en Berlín y por seguir reencontrándonos siempre que podamos.

Por supuesto, gracias también a toda mi familia. Sin duda una de las cosas que más echo de menos es poder pasar momentos importantes juntos, pero sé que siempre estás ahí. No puedo sentirme más afortunada. A mis padres, mamá, papá, gracias por confiar siempre en mí y enseñarme que con esfuerzo y trabajo puedo conseguir todo lo que me proponga.

Y a Iñigo, por ser el mejor compañero de vida que se puede tener. Gracias por tu apoyo, cariño y comprensión todos estos años. Lo conseguimos. Te quiero.

Thank you.
Dank je wel.
Vielen Dank.
Gracias.
