MACRO-ECONOMIC DETERMINANTS OF
INTERNATIONAL MIGRATION IN EUROPE

The book series Population Studies aims at disseminating results of research on population trends, in the broadest sense.

Series editorial board: Melinda Mills, Anton Oskamp & Harry van Vianen.
In memory of Anton Kuijsten.

Manuscripts can be submitted to Dutch University Press
Bloemgracht 82hs, 1015 TM Amsterdam, The Netherlands

Chapter 1	INTRODUCTION	1
1.1	Background	1
1.2	Research goal	3
1.3	Scientific relevance	5
1.4	Societal relevance	6
1.5	Determinants of international migration	6
1.6	International migration data	9
1.7	Structure of the thesis and research questions	10
Chapter 2	HISTORICAL OVERVIEW	13
2.1	Aim, approach and data	13
2.2	International migration patterns in Europe: a qualitative description	13
2.2.1	The sixties: high demands for labour	14
2.2.2	The seventies: the changeover from labour to family and return migration	15
2.2.3	The eighties: from a 'period of rest' to high inflows of asylum seekers and ethnic migrants	17
2.2.4	The nineties: towards converging migration patterns?	17
2.3	Empirical classifications of countries	19
2.3.1	The era of the Cold War	19
2.3.2	The post-communist era	26
2.4	Conclusion	29
Chapter 3	A THEORETICAL FRAMEWORK OF INTERNATIONAL MIGRATION	31
3.1	Introduction	31
3.2	Theories of international migration	32
3.2.1	Theories explaining the initiation of international migration	33
3.2.2	Theories explaining the course of international migration flows over time	34
3.3	A theoretical framework based on the international migration systems approach	34
3.4	Direct effects	38
3.4.1	Economy → international migration	38
3.4.2	Society → international migration	40

3.4.3	Linkages between countries → international migration	41
3.4.4	Policy → international migration	42
3.5	Synthesis	44
3.5.1	Neo-classical economic theory	44
3.5.2	The dual labour market theory	46
3.5.3	The new economics of labour migration	48
3.5.4	The relative deprivation theory	49
3.5.5	The world systems theory	52
3.5.6	Network theory	54
3.5.7	Institutional theory	55
3.6	Conclusion	56
 Chapter 4		
	ANALYSES ON NET MIGRATION AND TOTAL IMMIGRATION AND EMIGRATION	59
4.1	Aim and background	59
4.2	Hypotheses	60
4.3	Data	62
4.4	Methodology	64
4.5	Country-specific analyses for former labour-importing countries	65
4.5.1	The Dutch case study	65
4.5.2	Other former labour-importing countries	69
4.6	Country-specific analyses for former labour-exporting countries	73
4.6.1	The Spanish case study	74
4.6.2	Other former labour-exporting countries	76
4.7	Pooled models for Western Europe	78
4.8	Tentative analyses for Eastern Europe	84
4.9	Conclusions and implications for projections	87
 Chapter 5		
	INTERNATIONAL MIGRATION IN THE POST-INDUSTRIAL ERA: SOME STYLISTED FACTS	93
5.1	Introduction	93
5.2	Labour migration	94
5.3	Return migration	97
5.4	Chain migration	101
5.5	Asylum migration	104
5.6	A comparison of immigration types in Western Europe	105
5.7	Ethnic migration from and within Central and Eastern Europe	106
5.8	Conclusion	114

Chapter 6	ANALYSES ON INTERNATIONAL MIGRATION TYPES: CASE STUDIES ON SPECIFIC MIGRATION FLOWS	117
6.1	Introduction	117
6.2	Labour migration	118
6.2.1	Hypotheses	119
6.2.2	Low-skilled 'classical' labour migration: migration from Portugal to Switzerland	120
6.2.3	High-skilled 'post-industrial' labour migration: employed migration from Sweden to Norway	124
6.3	Return migration	126
6.3.1	Hypotheses	126
6.3.2	Return migration within the EU/EFTA region: migration of Italians from Germany	128
6.3.3	Return migration from the EU/EFTA region: migration of Turks from Germany	132
6.4	Family migration	135
6.4.1	Hypotheses	135
6.4.2	Migration of Moroccans to the Netherlands	136
6.5	Ethnic migration in transition countries	138
6.5.1	Hypotheses	139
6.5.2	Ethnic migration from the former East Bloc to Western Europe: <i>Aussiedler</i> from Romania	140
6.5.3	Ethnic migration between countries of the former East Bloc: migration of ethnic Hungarians from Romania	142
6.5.4	Ethnic migration between states of the former Soviet Union: the repatriation of ethnic Russians from Latvia	144
6.6	Conclusion	146
Chapter 7	THE DISTRIBUTION OF ASYLUM SEEKERS OVER NORTHERN AND WESTERN EUROPEAN COUNTRIES	149
7.1	Introduction	149
7.2	Outline	150
7.3	Background: becoming an asylum migrant in Europe	150
7.3.1	Causes of refugee movements	153
7.3.2	Main areas of origin	154
7.3.3	Global distribution	155
7.3.4	Asylum seekers in Northern and Western Europe	157
7.3.5	Refugee recognition in Northern and Western Europe	161

7.3.6	Some conclusions	163
7.4	Explanatory models	164
7.4.1	Determinants of the choice of a country of asylum	164
7.4.2	Data and methodology	166
7.4.3	Total asylum applications	169
7.4.4	Asylum applications from (the former) Yugoslavia	171
7.4.5	Turkish asylum applications	173
7.5	Conclusions and discussion	174
 Chapter 8		
	CONCLUSIONS AND IMPLICATIONS FOR INTERNATIONAL MIGRATION FORECASTS	177
8.1	Outline	177
8.2	Overview of the main results	177
8.3	Economic determinants of international migration types which are sensitive and insensitive to immigration policies	179
8.4	Net migration scenarios for the EU 15	181
8.5	Future trends of the different migration types	184
8.5.1	Labour migration	184
8.5.2	Return migration	185
8.5.3	Family migration	186
8.5.4	Ethnic migration	186
8.5.5	Asylum migration	187
8.6	Final remarks	188
 References		189
Samenvatting (Summary in dutch)		202

List of figures

Figure 1.1	Three dimensions of international migration	7
Figure 2.1	Average net migration rates in the sixties	15

Table 7.8	Parameter estimates of multinomial logit models of the share of Turkish asylum seekers in the five most important receiving countries, 1985-1999	173

Acknowledgements

When I was glancing through a newspaper in the spring of 1998, a job advert attracted my attention. At the Netherlands Interdisciplinary Demographic Institute (NIDI) there was a job opening for a PhD student to work on the project 'Economic determinants of international migration in Europe'. This project was financed by the Netherlands Organisation for Scientific Research (NWO grant 510-03-904). I decided to apply and after the selection procedure I started my PhD research in October 1998.

The NIDI appeared to be a congenial and inspiring environment to carry out my research. After my contract with NWO ended, the board of the institute gave me the opportunity to continue my PhD research for an additional year on a half-time basis at NIDI. I want to thank all my ex-colleagues, without exception, for making my time as a PhD student pleasant.

A number of people contributed to the realisation of this dissertation. The people who contributed most are my supervisors at NIDI. Without the help of Leo van Wissen, Nicole van der Gaag and Rob van der Erf this book could not have been completed. I owe a large debt of gratitude to them. Thanks also go to Frans Willekens. His course 'Life history data analysis' introduced me to the world of demographic research. Furthermore, he critically read the final version of my manuscript. Further acknowledgements go to Frans van Poppel and Evert van Imhoff for their helpful suggestions and comments on chapters 3 and 4, respectively. I also would like to express my gratitude to Gina Rozario who corrected my English.

This PhD project is part of the larger research program 'Towards a scenario model for socio-economic determinants of population dynamics in Europe'. This research program included three other PhD-projects, which were conducted by Jeroen Spijker, Taeke Gjaltema and Tomáš Sobotka. We were all in the same boat. Our many, often demographic, discussions and chats contributed greatly to the quality of this thesis and my general well-being.

My final words of gratitude go to the most important people in my life. I would like to thank my parents for their love and support that they have given to Hellen, Bart and me. They were always there for me through the duration of my 25 years in education. Last, but not least, I would like to say a huge thank you to Laura for her love, encouragement and patience.
