Copyright

Other than for strictly personal use, it is not permitted to download or to forward/distribute the text or part of it without the consent of the author(s) and/or copyright holder(s), unless the work is under an open content license (like Creative Commons).

The publication may also be distributed here under the terms of Article 25fa of the Dutch Copyright Act, indicated by the "Taverne" license. More information can be found on the University of Groningen website: <https://www.rug.nl/library/open-access/self-archiving-pure/taverne-amendment>.

Take-down policy

If you believe that this document breaches copyright please contact us providing details, and we will remove access to the work immediately and investigate your claim.

Downloaded from the University of Groningen/UMCG research database (Pure): <http://www.rug.nl/research/portal>. For technical reasons the number of authors shown on this cover page is limited to 10 maximum.

Acknowledgements

I am most grateful to my supervisor Erik van der Giessen for his prompt guidance and encouragement during these years, for the many stimulating discussions and for giving me the chance of attending several conferences abroad.

I am very grateful to Alan Needleman, not only for his invaluable scientific insight, but also for correcting awkward English expressions in the papers he co-authored.

I would also like to thank Morton Gurtin for the long e-mail discussion on defect energy.

Chapter 7 could not have been written without the experimental work performed by Joost Vlassak and Yong Xiang.

I would also like to acknowledge the Reading Committee composed of Professors Jeff de Hosson, Hans de Raedt and Bart van Wees for their useful comments.

Lucia Nicola
