**Synergies and end-effector
kinematics in upper limb movements**

Inge Tuitert

Colophon

This PhD-thesis was an international cooperation, a 'co-tutelle', between the University of Groningen [the Netherlands] and Aix-Marseille University [France].

The experiments in chapters 2, 3, 4, and 5 were conducted at the Center for Human Movement Sciences, University Medical Center Groningen, the Netherlands.

The project was financially supported by funding from the Excellence Initiative of Aix-Marseille University - A*MIDEX, a French "Investissements d'Avenir" program.

PhD-training was facilitated by the research institute School of Health Research [SHARE, Groningen] and l'Ecole Doctorale Sciences du Mouvement Humain [EDSMH, Marseille].

The printing of this thesis was financially supported by:

- University of Groningen
- University Medical Center Groningen

Paranymphs: Anniek Heerschop
Laura Golenia

Synergies and end-effector kinematics in upper limb movements

PhD thesis

to obtain the degree of PhD of the
 University of Groningen
 on the authority of
 Rector Magnificus Prof. C. Wijmenga
 and in accordance with
 the decision by the College of Deans

and

to obtain the degree of Doctor of
 Aix-Marseille University
 on the authority of the
 President Prof. Y. Berland
 and in accordance with
 the decision by the Vice President for Research.

Double PhD degree

This thesis will be defended in public on

Wednesday 6 November 2019 at 14.30 hours

by

Inge Tuitert

born on 11 October 1990

in Deventer

Supervisors

Dr. R.M. Bongers
Prof. R.J. Bootsma
Prof. E. Otten

Assessment Committee

Prof. A. Roby-Brami
Prof. R.G.J. Meulenbroek
Prof. J.J. Temprado
Prof. T. Hortobágyi

TABLE OF CONTENTS

General
Introduction

6

Task constraints act at
the level of synergies
and at the level of end-
effector kinematics
in manual reaching
and manual lateral
interception

58

Comparing different
methods to create a
linear model for the
uncontrolled manifold
analysis

14

General
Discussion

76

Does practicing a
wide range of joint
angle configurations
lead to higher flexibility
in a manual obstacle-
avoidance target-
pointing task?

28

References

86

The effect of the
height to which the
hand is lifted on hori-
zontal curvature in
horizontal point-to-
point movements
