Linda Adriana Toolsema-Veldman

geboren op 5 mei 1975
te Groningen

Promotor: Prof. dr E. Sterken
Co-promotores: Dr M.A. Haan
Dr L. Schoonbeek

Beoordelingscommissie: Prof. dr P. van Cayseele
Prof. dr P. Kooreman
Prof. dr J. Swank

Acknowledgements

This thesis contains most of the research I conducted as a PhD student (aio) at the University of Groningen, Department of Economics, during the period 1998-2002. Many people have been of great help during that period.

First of all I thank Bert Schoonbeek and Marco Haan for their guidance and support and for keeping me on the right lines. Second, I thank the committee consisting of Patrick van Cayseele, Peter Kooreman, and Job Swank for their willingness to read the entire manuscript. I would also like to thank Marco Haan, Jan Jacobs, Eko Riyanto, and Bert Schoonbeek for conducting fruitful joint research projects and letting me use the results in this thesis. To reflect this fact I use the plural form throughout the thesis. I enjoyed cooperating with Jakob de Haan and Jan-Egbert Sturm, and I am grateful for many helpful discussions with my roommates and colleague-aio's Philipp Maier and Adriaan Soetevent.

I also thank the following people for comments and suggestions on various chapters: Robert-Paul Berben; Steven Brakman; Hans Degryse; Hans van Ees; Ben Heijdra; Theo Junius; Jan Kakes; Clemens Kool; Robert Lensink; Steven Ongena; Giancarlo Spagnolo; Elmer Sterken; Ron Storm (Statistics Netherlands); several anonymous referees; and participants of the EARIE 1999 (Turin), EARIE 2000 (Lausanne), and EARIE 2001 (Dublin) conferences, the workshop 'Financial structure, bank behaviour, and monetary policy in the EMU' (October 2000, Groningen), the NAKE Days 2000 and 2002, a seminar at De Nederlandsche Bank, and several seminars at the University of Groningen.

Financial support is gratefully acknowledged from the graduate school SOM, who financed the publication of this thesis. I also thank SOM's director Jakob de Haan for his efforts in a critical period of my PhD research. I am grateful to NAKE, the Dutch Network of Economics,

which provided the educational part of my PhD. One of the NAKE courses ('Oligopoly theory', taught by Bert Schoonbeek) resulted in a paper that was the basis for chapter 5 of this thesis.

Finally, I thank my parents for their continuous support, and apologize for not using their family name in my publications, including this thesis. I thank Jan for letting me use his, and for enduring endless talks on economics so that by now he has become half an economist himself.

Linda Toolsema-Veldman

Contents

1	Introduction and overview	1
1.1	Aim of the study	2
1.2	The IO approach to banking	4
1.3	Outline	6
2	Competition in banking	11
2.1	Introduction	11
2.2	Approaches to banking	12
2.3	A competitive banking sector: Good or bad?	17
2.4	The IO approach to banking	20
2.4.1	The ‘two-sided nature’ of the bank	21
2.4.2	Asymmetric information	25
2.4.3	Product differentiation	28
2.4.4	Bank-firm relationships and switching costs	29
2.4.5	Networks	31
2.4.6	Competition versus stability, and regulation	32
2.4.7	Monetary transmission	33
2.5	Competition in banking: Empirical evidence	34
2.5.1	Competition versus concentration	34
2.5.2	Competitiveness	38
2.6	Conclusion	43
3	Competition in the Dutch consumer credit market	45
3.1	Introduction	45
3.2	Assessing the degree of competition among banks	46
3.2.1	The Bresnahan-Lau approach	49
3.2.2	A dynamic extension	51
3.3	Data description	53
3.4	Empirical analysis	56

3.5	Conclusion	63
	Appendix: Data and sources	64
4	The effects of an industry-wide cost change in banking	67
4.1	Introduction	67
4.2	The Stackelberg duopoly model	69
4.3	The results	71
4.4	The banking case	76
4.5	Conclusion	80
5	Reserve requirements and double Bertrand competition in banking	81
5.1	Introduction	81
5.2	The model	83
5.3	Discussion of equilibrium: The case $\alpha = 0$	86
5.4	Effects of a reserve requirement	89
5.5	Conclusion	92
6	Monetary policy and market power in banking	93
6.1	Introduction	93
6.2	The model	98
6.3	Solution of the model	101
6.4	Effects of monetary policy	104
6.5	Conclusion	108
7	Asymmetric mortgage rate adjustments	111
7.1	Introduction	111
7.2	Empirical analysis of mortgage rate adjustments	113
7.3	Explanations for the asymmetry	123
7.4	Conclusion	128
	Appendix: Data and sources	129
8	Asymmetric price adjustments with the mfc clause	131
8.1	Introduction	131
8.2	The most-favored-customer clause	134
8.3	The model	135
8.4	Solution of the model	137
	8.4.1 No firm offers the mfc clause: $M = (0, 0)$	138
	8.4.2 Only firm A offers the mfc clause: $M = (1, 0)$	138
	8.4.3 Both firms offer the mfc clause: $M = (1, 1)$	150

8.4.4	Equilibrium policy choice	155
8.5	Conclusion	157
9	The commitment effect of choosing the same bank	159
9.1	Introduction	159
9.2	Setup of the model	163
9.3	Strategic substitutes	165
9.4	Example: Cournot duopoly with R&D investment	169
9.5	Strategic complements	172
9.6	Example: Advertising	174
9.7	Extensions	177
9.7.1	Bargaining over repayment conditions	177
9.7.2	Multiple firms	179
9.7.3	Multiple dimensions of investment	182
9.8	Conclusion	183
10	Summary and conclusion	187
	Bibliography	197
	Samenvatting (Dutch summary)	213
